Environmental
Assessment Act

NOTICE OF APPROVAL TO PROCEED
WITH THE UNDERTAKING

RE: An Environmental Assessment for a Proposal to
Increase the St. Catharines Area Electrical
Supply

Proponent: Ontario Hydro
EA File No. 1-78-0017-000

TAKE NOTICE that the period for requiring a hearing, provided for in the *Notice of Acceptance of the Environmental Assessment* for the undertaking, expired on December 31, 1981. I have received no notices requiring a hearing by the Environmental Assessment Board with respect to approval to proceed with the undertaking.

I have considered the purpose of the *Environmental Assessment Act* and the environmental assessment of the undertaking as accepted by me.

Accordingly, I hereby give approval to proceed with the undertaking, subject to the 15 terms and conditions outlined in Schedule A attached.

REASONS:

The reasons for giving approval are:

- (1) After giving the *Notice of Completion of the Environmental Assessment Review* dated June 8,

1981, I received submissions from the City of St. Catharines and from the Federation of Ontario Naturalists. Both of these parties indicated concerns with respect to specific aspects of the proposal by Ontario Hydro, but have not required a hearing. I do not consider it advisable to require the Environmental Assessment Board to hold a hearing at this time for the following reasons:

Meetings for the exchange of information and resolution of outstanding concerns have been successfully held. Neither Ontario Hydro nor the above-referenced parties have required a hearing. The parties who participated in the government review and who made submissions have concerns about a routing that would traverse Short Hills Provincial Park. However, these parties now understand the reasons for the choice of this route in relation to many others that were considered. The conditions of approval are designed to protect the environment in accordance with understandings and agreements reached involving Ontario Hydro, those parties who made submissions and the government review team. No Notices have been received requiring a hearing by the Environmental Assessment Board after giving the *Notice of Acceptance of the Environmental Assessment*, dated December 8, 1981. I am not aware of any outstanding issues with respect to this undertaking which suggest that a hearing should be called.

- (2) The environmental assessment, together with the Government review and conditions of approval, sufficiently fulfill the purpose of the *Environmental Assessment Act*, which is the betterment of the people of the whole or any part of Ontario by providing for the protection, conservation and wise management in Ontario of the environment.

Dated at Toronto, this 28th day of May, 1982.

K. C. NORTON,
Minister of the Environment,
135 St. Clair Avenue West,
14th Floor,
Toronto, Ontario M4V 1P5.

The study design shall provide for a monitoring report to be submitted to the Director, Environmental Approvals Branch, Ministry of the Environment, within three months following completion of construction and a final report to be submitted not

later than one year after the completion of construction.

- 12(a) Ontario Hydro shall appoint an environmental field inspector whose role shall be to ensure compliance, during all phases of construction, with approved construction schedules, plans, procedures, specifications and drawings.
- (b) This environmental inspector shall have the power to stop work for work not in compliance with this approval and conditions.
- (c) The environmental inspector shall produce daily summary reports of his observations and activities. These reports will be filed weekly with the Director, Environmental Approvals Branch, Ministry of the Environment.
13. Ontario Hydro shall ensure that the undertaking is carried out in accordance with the Ontario Hydro "Protocol for Community Noise Control".
14. Treasurers' Sales of Lands for Taxes

Each year, municipal and county treasurers compile a list of properties against which taxes are outstanding for at least two successive years, which is a period sufficient to permit sale of the owner's assets to reimburse the municipality. These lists are submitted by the municipal representative to the Ministry of Government Services for publication in THE ONTARIO GAZETTE.

The Gazette is published every Saturday. Tax sale lands are included only in the issue of the first Saturday of each month. Each property is described so that it may be properly identified. Also shown are the amount of tax arrears and costs, and the date, time and place where the sale will be held, which is usually in a public building in the locality. Sales are held three months or later following the date of publication in the Gazette and are subject to a reserve bid equal to the amount of tax arrears and costs.

The previous owner may by law redeem the property any time within one year and one day after the date of tax sale by paying to the municipality all arrears plus costs levied. Where redemption occurs, the municipality reimburses the purchaser of tax sale lands for the amount paid at the sale plus an additional amount to be determined in each case.

If the land is not redeemed in the manner described above, the purchaser at sale, receives from the municipality a tax deed or certificate which should be registered in the appropriate Land Titles or Registry Office. A purchaser should ascertain from either of these offices, information relating to any of the charges or liens against the land and consider the advisability of employing the services of a solicitor to determine the extent, if any, of his liability.

ENVIRONMENTAL ASSESSMENT ACT

O. Reg. 410/82.

Exemption—County of Oxford—
OXFO-CT-1.

Made—June 3rd, 1982.

Approved—June 3rd, 1982.

Filed—June 14th, 1982.

ORDER MADE UNDER THE ENVIRONMENTAL ASSESSMENT ACT

EXEMPTION—COUNTY OF OXFORD— OXFO-CT-1

Having received a request from the County of Oxford that an undertaking, namely:

the expansion, operation, maintenance and closure of the existing Holbrook Sanitary Landfill Site, within a total site area of 40.5 hectares located in Lot 20 and Lot 21, Concession 3, Township of Norwich, County of Oxford for the disposal of domestic, commercial and non-hazardous solid industrial wastes,

be exempt from the application of the Act pursuant to section 29; and

Having been advised by the County of Oxford that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons and property indicated will occur:

- A. The County would be subject to delay and expense if it were required to submit the undertaking to an environmental assessment. The County estimates that the activity at the Holbrook site will continue for a further two-year period and the delay and expense in preparing an environmental assessment for this undertaking is not warranted.

Having weighed such injury, damage, or interference against the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

The undersigned is of the opinion that it is in the public interest to order and orders that the undertaking is exempt from the application of the Act for the following reasons:

- A. A Provisional Certificate of Approval No. A 070702 under the *Environmental Protection Act* dated February 1, 1982 was issued to the County of Oxford for the use and operation of the Holbrook Sanitary Landfill site because the Director of the Environmental Approvals Branch of the Ministry of the Environment was of the opinion that an emergency situation existed by reason of danger to the health and safety of persons, immediate risk of impairment to the quality of the natural environment, an immediate risk of injury or damage to property brought about by the failure of Oxford County to adequately provide or plan for the disposal of wastes from within the County and the emergency situation would be alleviated by the use and operation of the waste disposal site named in the Provisional Certificate of Approval.

The Director imposed conditions on the Provisional Certificate of Approval requiring the County to formally propose long-term solutions to waste disposal problems. The Director is satisfied that the County has adequately complied with or made a satisfactory attempt to comply with the conditions.

- B. The Provisional Certificate of Approval No. A 070702 expires on June 30, 1982 and the interim expansion of the Holbrook site is subject to the *Environmental Protection Act*. The Director has indicated his intention to require a hearing pursuant to the Act. This hearing will give local residents the opportunity to provide input to the Environmental Assessment Board and in turn to the Director on the technical aspects of this proposal.
- C. The County has submitted an application for approval for a new waste disposal site referred to as the Oxford County Landfill Site at Salford. A hearing under the *Consolidated Hearings Act, 1981* has commenced on this proposal.
- D. The conditions of this Order allow the Holbrook Sanitary Landfill Site to be operated for a limited period of time.
- E. No useful purpose would be served by conducting an environmental assessment process or further hearings under the *Environmental Assessment Act* on the suitability of the Holbrook Sanitary Landfill Site or landfill purposes.

- F. The continued use of the Holbrook facility is clearly an interim measure for which there are no other reasonable waste management alternatives which can be implemented within the necessary time frame.

This exemption is subject to the following terms and conditions:

1. Where an activity which otherwise would be exempt under this Order is being carried out in connection with or is part of, an undertaking for which an environmental assessment has been done and approval to proceed received, the activity shall not be exempt under this Order but shall be carried out in accordance with the approval to proceed.
2. No waste shall be deposited at the site pursuant to this Order after September 1, 1984. O. Reg. 410/82.

K. C. NORTON
Minister of the Environment

Dated this 3rd day of June, 1982.

Note

The use of tetracyclines during tooth development (last half of pregnancy, infancy and childhood to the age of 8 years) may cause permanent tooth discoloration (yellow-grey-brown). This reaction is more common during long-term use of the tetracyclines but has been observed following short-term courses. Enamel hypoplasia has also been reported. Tetracyclines should therefore not be used in this age group unless other antibiotics are not likely to be effective or are contraindicated.

Hypertension: Fixed Combination Drugs

A fixed combination drug is not indicated for initial therapy of hypertension. Hypertension requires therapy titrated to the individual patient. Recognizing this, if the fixed combination drug meets that titrated dose of its individual components, its use may be more convenient in the management of the individual patient. The treatment of hypertension is not static; it must be re-evaluated as conditions in each patient warrant. Adapted from F-D-C Reports, Sept. 11, 1972, p.8 (FDA Cardiovascular Advisory Committee).

Hypertension: Fixed Combination Drugs

A fixed combination drug is not indicated for initial therapy of hypertension. Hypertension requires therapy titrated to the individual patient. Recognizing this, if the fixed combination drug meets that titrated dose of its individual components, its use may be more convenient in the management of the individual patient. The treatment of hypertension is not static; it must be re-evaluated as conditions in each patient warrant. Adapted from F-D-C Reports, Sept. 11, 1972, p.8 (FDA Cardiovascular Advisory Committee).

Having received a request from the Minister of Natural Resources that an undertaking, namely:

The activity of implementing projects under the Ministry of Natural Resources Special Employment Programs which consist of:

1. Projects carried out under the Federal-Provincial Job Creation Program and under the Federal *Unemployment Insurance Act* and involving the:
1. Mining Sector Work Program
2. Accelerated Forest Improvement Program
3. Fisheries Special Employment Program
4. Conservation Authorities Sector Work Program
5. Provincial Parks Sector Work Program.
2. The Province of Ontario Short Term Job Creation Projects.
3. The Province of Ontario Fisheries Short Term Employment Program.

4. The supplementing of programs under the Canada Community Development Program,

be exempt from the application of the Act pursuant to section 29; and

Having been advised by the Minister of Natural Resources that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons and property indicated will occur:

- A. The Crown and the public will be damaged or frustrated because the Ontario Government budget objective of short-term job creation may be impeded by taking time for preparation and submission of an environmental assessment for this undertaking.

Having weighed such injury, damage, or interference against the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

The undersigned is of the opinion that it is in the public interest to order and orders that the undertaking is exempt from the application of the Act for the following reasons:

- A. The Government announced its objective to create short-term jobs in the Provincial budget of May 17, 1982.
- B. The programs are short-term, lasting one year, with the majority of projects being anticipated to be undertaken during the summer and fall of 1982 and no later than one year after the granting of this exemption order.
- C. The prime objective of these programs is aimed at providing short-term job opportunities for people who are currently unemployed.
- D. This order exempts only those projects which are carried out under the programs which form part of the undertaking and does not exempt similar projects undertaken as part of the normal operations of the Ministry of Natural Resources.

This exemption is subject to the following terms and conditions:

1. The Ministry of Natural Resources shall provide the Environmental Approvals Branch, within thirty days of the approval of this exemption, a list of the anticipated projects that will be exempted along with the following information on each project:

- project description and location;
- the scheduled project commencement and completion date;

- any related projects.

This list and information will be revised every two months thereafter as additional projects are proposed and approved or listed projects are completed or deleted.

2. If the Class Environmental Assessment does not have Environmental Quality Guidelines or an Environmental Quality Implementation Handbook, then the District Manager will ensure that, where appropriate, a related Environmental Quality Guidelines and an Environmental Quality Implementation Handbook are used.
3. This exemption does not apply to any project that is not completed within one year of the date of this order.
4. This order exempts only those projects which are carried out under the programs which form part of the undertaking and does not exempt similar projects undertaken as part of the normal operations of the Ministry of Natural Resources. O. Reg. 467/82.

Exemption—Hamilton Region Conservation
Authority—HMR-01.

Made—June 24th, 1982.

Approved—June 24th, 1982.

Filed—July 6th, 1982.

ORDER MADE UNDER THE
ENVIRONMENTAL ASSESSMENT ACT

EXEMPTION—HAMILTON REGION
CONSERVATION AUTHORITY—HMR-01

Having received a request from the Hamilton Region Conservation Authority as agent for The Regional Municipality of Hamilton-Wentworth that an undertaking, namely:

The construction, operation and maintenance program associated with the development of a wave action pool and related washroom and changing facilities, food and souvenir concessions, admission control structures, building renovations to an existing beachhouse pavilion, and landscaping consisting of tree planting, berming, fencing and lighting in Confederation Park, which is located on Lake Ontario, adjacent to the QEW at Highway 20, in Stoney Creek;

be exempt from the application of the Act pursuant to section 29; and

Having been advised that if the undertaking is subject to the application of the Act, the following damage or interference with the persons indicated will occur:

- A. The Hamilton Region Conservation Authority and The Regional Municipality of Hamilton-Wentworth will be damaged and interfered with by the time and subsequent cost required to prepare an environmental assessment for this undertaking which appears to have no significant adverse effects on the environment.

Having weighed such damage or interference against the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

The undersigned is of the opinion that it is in the public interest to order and orders that the undertaking is exempt from the application of the Act for the following reasons:

- A. The undertaking will not have any significant negative effects on the environment, and will occupy approximately three acres within an existing 210 acre regional park.
- B. The proposed undertaking has been the subject of a feasibility study which investigated market feasibility, long and short-term economic and financial considerations, environmental effects, safety and health concerns and operational and marketing considerations.

C. Confederation Park is ideally suited to the establishment of a wave action pool as many existing facilities can be utilized and alterations to the site to accommodate the facility are minimal.

D. I have been advised that projected pool attendance of 165,000 visitors is not expected to adversely affect traffic patterns and use of major roads in the vicinity of Confederation Park including the Queen Elizabeth Way and Highway 20 (Centennial Parkway).

E. I have been advised that the facility will not have a significant adverse effect on local recreational programming or activities but rather is expected to generate certain benefits including expanded programs and social trip activities.

This exemption is subject to the following term and condition:

1. This exemption shall expire if the Hamilton Region Conservation Authority is unable to commence construction by June 1, 1983.

Treasurers' Sales of Lands for Taxes

Each year, municipal and county treasurers compile a list of properties against which taxes are outstanding for at least two successive years, which is a period sufficient to permit sale of the owner's assets to reimburse the municipality. These lists are submitted by the municipal representative to the Ministry of Government Services for publication in THE ONTARIO GAZETTE.

The Gazette is published every Saturday. Tax sale lands are included only in the issue of the first Saturday of each month. Each property is described so that it may be properly identified. Also shown are the amount of tax arrears and costs, and the date, time and place where the sale will be held, which is usually in a public building in the locality. Sales are held three months or later following the date of publication in the Gazette and are subject to a reserve bid equal to the amount of tax arrears and costs.

The previous owner may by law redeem the property any time within one year and one day after the date of tax sale by paying to the municipality all arrears plus costs levied. Where redemption occurs, the municipality reimburses the purchaser of tax sale lands for the amount paid at the sale plus an additional amount to be determined in each case.

If the land is not redeemed in the manner described above, the purchaser at sale, receives from the municipality a tax deed or certificate which should be registered in the appropriate Land Titles or Registry Office. A purchaser should ascertain from either of these offices, information relating to any of the charges or liens against the land and consider the advisability of employing the services of a solicitor to determine the extent, if any, of his liability.

PERSONAL* AIR SAMPLING METHOD
FOR VINYL CHLORIDE

1. PRINCIPLE OF THE SAMPLING METHOD

Air, possibly containing vinyl chloride, is drawn at a specific flow rate for a known duration through two glass tubes in tandem, each containing 20/40 mesh activated charcoal. Each tube is analyzed separately for vinyl chloride by desorption with carbon disulfide and by gas chromatographic assay of the solvent extract. The presence of vinyl chloride in the second or back-up tube is used to indicate the extent of breakthrough during air sampling.

2. EQUIPMENT

The sampling train used to obtain an air sample containing vinyl chloride is to include the following components and satisfy the criteria suggested:

(1) A battery operated portable pump which:

- (a) is capable of delivering, for 6-8 hours, not less than 0.050 litres of air per minute (L/min) with the glass tubes, each containing activated charcoal, in the sampling train. The maximum deviation from the prescribed flow rate is not to exceed $\pm 5\%$ and the pump should be equipped with a pulsation damper;
- (b) is intrinsically safe, i.e., certified by an accepted agency as safe for use in potentially explosive atmospheres;
- (c) includes a calibrated flow meter or a mechanism for maintaining a constant flow rate;

(d) has an on-off switch and flow rate control or adjustment mechanism which are as tamper-proof as possible.

(2) Two sample collection devices (glass tubes), each of which is constructed from glass tubing approximately 70 millimetres (mm) in length, 4.0 mm in inner diameter and 6.0 mm in outer diameter and contains in sequence the following materials:

- (a) a plug of silanized glass wool immediately behind the inlet port;
- (b) 150 mg of 20/40 mesh activated charcoal; and
- (c) a 3 mm long plug of urethane foam immediately before the outlet port.

Each tube must be flame-sealed at both ends and be supplied with two caps for sealing the tube after it has been used for air sampling.

(3) A tube holder which:

- (a) includes an alligator clip for attachment to clothing;
- (b) includes an adapter for flexible tubing to ensure a leak proof fit for the sample collection device;
- (c) provides adequate protection against tube breakage.

(4) Tubing of sufficient length with appropriate wall thickness to prevent collapsing when air is drawn through and with appropriate inner diameter which will provide a leak proof fit to the tube holder and to the inlet port of the portable pump.

(5) A mercury thermometer for ambient air temperature measurement, accurate to $\pm 1^\circ\text{C}$.

(6) A barometer for measuring atmospheric pressure, accurate to ± 5 mm Hg.

3. SAMPLING PROCEDURE

(1) Preparation of pumps:

- (a) The pump battery pack must be fully charged, according to the manufacturer's instructions, before use in any workshift. If air sampling is carried out for more than one shift on the same day, a fully-charged battery pack must be substituted for the used one.
- (b) Flow meters or constant flow devices on the pumps must be calibrated at 0.050 L/min with the glass tubes in line by using a primary standard, such as a bubble meter, and the recommended procedure in the manufacturer's instructions for using such a primary standard apparatus, after:
 - (i) not more than 40 hours of operation;
 - (ii) receiving unusually harsh or potentially damaging treatment;
 - (iii) being disassembled for maintenance.

* This method may also be used for area sampling at a strategically selected location by placing a sampling train on a suitable support.

(2) Sampling:

- (a) Assemble the sampling train by connecting one end of the tubing to the inlet port of the pump and the other end to the adapter on the tube holder. The ends of the glass tubes must be broken to form openings of at least 2 mm. They are connected by the shortest possible length of tubing and are inserted into their holders.
- (b) Check for air leaks in the sampling train by turning on the pump and sealing the open end of the tube. The air flow indicator on a pump with a flow meter must drop to the zero flow position and oscillate slightly. If this does not occur, find the leak and either repair or replace the faulty component.
- (c) Label both tubes with appropriate sample numbers.
- (d) Assemble the tube holders and attach the pump to the worker's belt or place it in a pocket, draw the flexible tubing over the shoulder and fix the tube holders to the worker's clothing as near as possible to the breathing zone with the tubes vertical and the air inlet port facing upward. Ensure that the equipment will not interfere with the worker's normal duties.
- (e) Check again that the sampling train is properly assembled and switch on the pump. Allow the flow rate to stabilize for a short duration, then adjust the rate to the *pre-calibrated mark of 0.050 L/min*, if the pump has a flow meter. Pumps with constant flow devices must not be reset after the flow rate control mechanism has been calibrated to deliver air at this rate. A calibrated external flow meter may be used to check the airflow rate.
- (f) Note the following information for each sampling train:
 - (i) date of sampling;
 - (ii) company name;
 - (iii) model and serial number of the sampling pump;
 - (iv) calibration date of the sampling pump;
 - (v) name of worker being monitored;
 - (vi) job title of worker;
 - (vii) work or operation performed;
 - (viii) tube or sample number;
 - (ix) air flow rate;
 - (x) time of initiation of sampling.
- (g) Ensure that for any sampling performed during any survey, two control or blank glass tubes are obtained from the same source and the same batch as the sample tubes. These blank tubes are handled in

the same manner as the sample tubes (break, seal and transport) except that no air is drawn through them.

- (h) In a work area where vinyl chloride is produced or used, the maximum sampling duration for obtaining an air sample must not exceed 100 minutes. A shorter sampling duration may be used to avoid significant breakthrough if a high concentration of vinyl chloride and other contaminants or high humidity is suspected. A sufficient number of sequential air samples must be taken to determine the worker's time-weighted average exposure.
- (i) In a work area where polyvinyl chloride products are fabricated, the minimum sampling duration for obtaining an air sample must not be less than 5 hours. It may be necessary to obtain an air sample over the entire work shift in order to have sufficient amount of analyte in the sample for analysis.
- (j) During the sampling interval, the sampling train must be checked periodically to ensure that it is functioning properly. The air flow rate must not be readjusted after the initial flow rate is set. If the flow rate changes significantly, terminate sampling and take another sample.
- (k) The ambient air temperature and pressure in the sampling area should be recorded at least once.
- (l) When two or more substances are known or suspected to be present in the air, such information, including their suspected identities, should be recorded since these compounds may interfere with the analysis of vinyl chloride.
- (m) To terminate sampling, perform the following sequence of steps:
 - (i) check the air flow rate just prior to termination of air sampling;
 - (ii) record the time of termination of sampling;
 - (iii) switch off the pump and carefully remove the sampling train from the worker;
 - (iv) remove the glass tubes and cap the inlet and outlet ports;
 - (v) pack the capped tubes tightly to minimize breakage and ship them to a laboratory in an airtight plastic container placed inside a thermos containing ice.
- (n) Where a maximum concentration determination is required it shall be determined by following the procedure specified above with the following exceptions:
 - (i) a sufficient number of air samples should be taken during the time

periods when such maximum concentration is anticipated from knowledge of the work process, work operation, work cycle, or work practices; and

- (ii) each air sample should be taken for a duration of 15 minutes.
- (o) When the amount of vinyl chloride in the second tube exceeds 25% of the total vinyl chloride found in both tubes, there has been a significant breakthrough and the sampling conditions should be reviewed.

4. ANALYSIS AND CALCULATION OF RESULTS

- (1) Follow the analytical method entitled "Determination of Vinyl Chloride on Charcoal Used for Air Sampling" in carrying out the analyses of sample tubes for vinyl chloride.
- (2) Corrections for the field blank are made for each sample provided that the various amounts of analyte in all sample tubes are greater than the amount of analyte in the field blank tubes.
- (3) The concentration of vinyl chloride in the air sample can be calculated in parts per million by volume (ppm) by using the following equation:

$$C = \frac{A \times 0.392}{\frac{F \times t \times 298}{(273 + T)} \times \frac{P}{760}}$$

where C = Concentration of vinyl chloride in ppm

A = corrected amount of vinyl chloride in the sample tube in μg

F = air flow rate in litres per minute

T = temperature in $^{\circ}\text{C}$

P = pressure in mm Hg

t = sampling duration in minutes

DETERMINATION OF VINYL CHLORIDE ON CHARCOAL USED FOR AIR SAMPLING

1. PRINCIPLE OF METHOD

- (1) Air is drawn at a specific flow rate for a known duration of time through two glass tubes arranged in sequence and containing charcoal to absorb the organic substances present. The tubes are then closed with the supplied plastic caps and kept cool (4°C) pending analysis.
- (2) Each tube is scored with a file in front of the first portion of charcoal and broken open. All the charcoal from the tube is transferred to a small, stoppered sample container and the analyte is desorbed with carbon disulfide.
- (3) A known volume of the solvent extract is injected into a gas chromatograph (GC).

- (4) The detector response to the vinyl chloride present in the sample is determined and compared with that of appropriate standards.

2. APPARATUS

- (1) Gas Chromatograph equipped with a flame ionization detector (FID).
- (2) Column ($10' \times 0.125''$ OD stainless steel) packed with 10% Free Fatty Acid Phase stationary phase on 80/100 mesh Chromosorb W/AW.

NOTE: Other contaminants collected with the analyte under review may modify the choice of column packing. Other columns may give an equivalent performance.

- (3) An electronic integrator or some other suitable method for measuring detector response.
- (4) 5 mL sample containers with caps lined with an inert material such as Teflon.
- (5) Microlitre syringes: 10 μL and other convenient sizes for preparing standards.
- (6) Pipettes: 1.0 mL delivery pipettes.
- (7) Assorted volumetric flasks.
- (8) Pressure-reducing valves: a 2-gauge, 2-stage, pressure-reducing valve and appropriate hose connections are needed for each compressed gas tank used.
- (9) A rotary shaker.
- (10) A 25 mL gas-tight syringe.
- (11) A septum faced with inert material such as Teflon.
- (12) An analytical balance capable of weighing to 0.1 mg.

3. REAGENTS

- (1) Carbon disulfide, chromatographic quality.
- (2) Vinyl chloride gas, 99%+ purity.
- (3) Purified nitrogen.
- (4) Pre-purified hydrogen.
- (5) Pre-dried compressed air.
- (6) Deionized water.
- (7) n-butanol (glass distilled).

4. PROCEDURE

- (1) Cleaning of Equipment
 - (a) Before use, all new glassware should be cleaned to remove any residual grease or chemicals.
 - (b) Glassware should be cleaned by soaking in an approximately one in five dilution of concentrated nitric acid in water for at least 6 hours, and then rinsed thoroughly with tap water and deionized water, in that order, and then dried.

(2) Analysis of Sample

- (a) Preparation of sample. Each charcoal tube is scored with a file in front of the first portion of charcoal and broken open. The glass wool is removed and discarded. The front and back sections of charcoal from each individual tube are transferred to a 5 mL stoppered container and analyzed together.
- (b) Desorption of samples. Immediately prior to analysis, 1.0 mL of carbon disulfide is pipetted into the sample container. (All work with carbon disulfide should be performed in a hood). Tests indicate that, with agitation, on a rotary shaker, desorption is complete in 30 minutes.
- (c) Conditions for the gas chromatograph (GC). The typical operating conditions for the gas chromatograph are:
 - (i) 20 mL/min (30 psig) nitrogen carrier flow
 - (ii) 210°C injector temperature
 - (iii) 230°C detector temperature
 - (iv) Oven temperature program
Three minutes isothermally at 60°C followed by a temperature increase of 150°C at a rate of 30°C/min and five minutes isothermally at 150°C.
- (d) A known volume of sample is injected into the GC and the area of the sample peak is measured, preferably by means of an electronic integrator.
- (e) Two tubes are handled at the sampling site in the same manner as a sample tube (break, seal and transport), except that no air is sampled through these tubes. These tubes are labelled as blanks and must be analyzed in accordance with the total procedure.

5. CALIBRATION AND STANDARDS

(1) Stock Standard Preparation

- (a) Pipette 5.0 mL of n-butanol into a 5 mL sample container.
- (b) Seal the container using a septum faced with an inert material such as Teflon and a screw cap. Allow to stand until it equilibrates with the ambient temperature of the balance room (approximately one hour).
- (c) Weigh the container and contents on an analytical balance and note the weight.
- (d) Cool the container and contents in an ice-water bath.
- (e) Insert a spare syringe needle through the septum of the container and keep the needle tip above the liquid. This acts as an air bleed.
- (f) Draw 25 mL of pure vinyl chloride into a gas-tight syringe and close the valve.

- (g) Insert the tip of the syringe needle through the septum, already fitted with the air bleed, and continue until the needle tip is below the level of the n-butanol.
- (h) Open the syringe valve and expel the vinyl chloride slowly into the cold n-butanol.
- (i) When all the vinyl chloride is expelled, withdraw the syringe needle and air bleed.
- (j) Carefully dry the outside of the sample container and allow it to stand until it equilibrates with the ambient temperature of the balance room (approximately one hour).
- (k) Re-weigh the sample container and contents.
- (l) The weight of vinyl chloride dissolved in the n-butanol is calculated by subtracting the tare weight of sample container plus n-butanol from that of container, n-butanol and vinyl chloride determined by the second weighing 5(1)(k).
- (m) The exact concentration is determined from the following formula:

$$\frac{\text{Net weight (in mg) of vinyl chloride dissolved in n-butanol}}{5 \text{ (mL)}} \times \frac{\% \text{ purity of vinyl chloride}}{100}$$

- (2) A series of calibration standards is prepared from the stock standard by diluting suitable aliquot portions to 1.0 mL with CS₂. The standards required are 5, 10, 25 and 50 µg/mL.
- (3) The calibration standards are analyzed under the same GC conditions and during the same time period as the unknown samples.
- (4) A standard curve is prepared by plotting concentration in µg/mL versus peak area and is found to be linear over the concentration range 5 to 50 µg/mL.

NOTE: Due to daily variations in GC parameters a new calibration curve must be determined daily.

6. CALCULATIONS

- (1) Read the weight, in µg, corresponding to each peak area (section 4(2)(d)) from the standard curve. No volume corrections are needed, because the standard curve is based on µg/1.0 mL carbon disulfide, and the volume of sample injected is identical to the volume of the standard injected.
- (2) Corrections for the blank must be made for each sample

$$\mu g = \mu g \text{ sample} - \mu g \text{ blank}$$

where

$$\mu g \text{ sample} = \mu g \text{ found on both sections of the sample tube}$$
$$\mu g \text{ blank} = \mu g \text{ found on both sections of the blank tube.}$$

7. DETECTION LIMIT

The detection limit of vinyl chloride in carbon disulfide based on a 3-μL injection, was found to be 1 μg vinyl chloride/mL carbon disulfide.

8. INTERFERENCES

- (1) When the amount of water in the air is so great that condensation occurs in the tube, organic vapours will not be absorbed efficiently.
- (2) Any compound which has the same retention time as the analyte at the operating conditions described in this method may interfere. Retention time data for a single GC system does not provide proof of chemical identity: a mass spectrogram of the sample may serve to confirm identity (see attached spectrogram).

9. PRECISION

Standard solution being measured (μg/mL)	No. of samples	Relative standard deviation (%)
5.0	27	1.3
25.0	30	1.2
50.0	30	1.4

10. DETERMINATION OF DESORPTION EFFICIENCY

- (1) The desorption efficiency of a particular compound may vary from one batch of charcoal to another and from one laboratory to another. Thus, it is necessary to determine, at least once, the percentage of the specific compound that is removed in the desorption process, for each batch of charcoal used. The percentage recovery is variable with the amount of compound present and the concentration range must cover that found in the samples.

NOTE: Unless a vapour chamber is available for the preparation of suitable spiked samples, the NIOSH technique of spiking samples with known amounts of solution of vinyl chloride dissolved in carbon disulfide should be followed.

(2) Procedure for Determining Desorption Efficiency

- (a) 150 mg of activated charcoal is placed into a 5 mL glass vial.
- (b) A known amount of carbon disulfide containing vinyl chloride at a concentration of 1 μg/μL is injected directly into the activated charcoal with a microlitre syringe, and the vial is sealed using a screw cap with a septum faced with an inert material such as Teflon.
- (c) The prepared vials are allowed to stand overnight to assure complete adsorption of the analyte onto the charcoal. These vials are referred to as the sample.
- (d) A blank is prepared by placing 150 mg of activated charcoal into a 5-mL vial, adding to it an amount of carbon disulfide equal to that used in the sample preparation and treating it in the manner described above.
- (e) The sample and blank are treated in exactly the same manner as the sample described in sections 4(2)(b) to 4(2)(d).

desorption efficiency =
$$\frac{\text{average weight recovered } (\mu g)}{\text{weight added}}$$

Amount of vinyl chloride added to sample (μg)	No. of Samples	Mean % Recovery	Desorption Efficiency
12.3	10	99.1	0.991
23.9	10	100.1	1.001
37.0	10	101.3	1.013
65.3	10	103.9	1.039

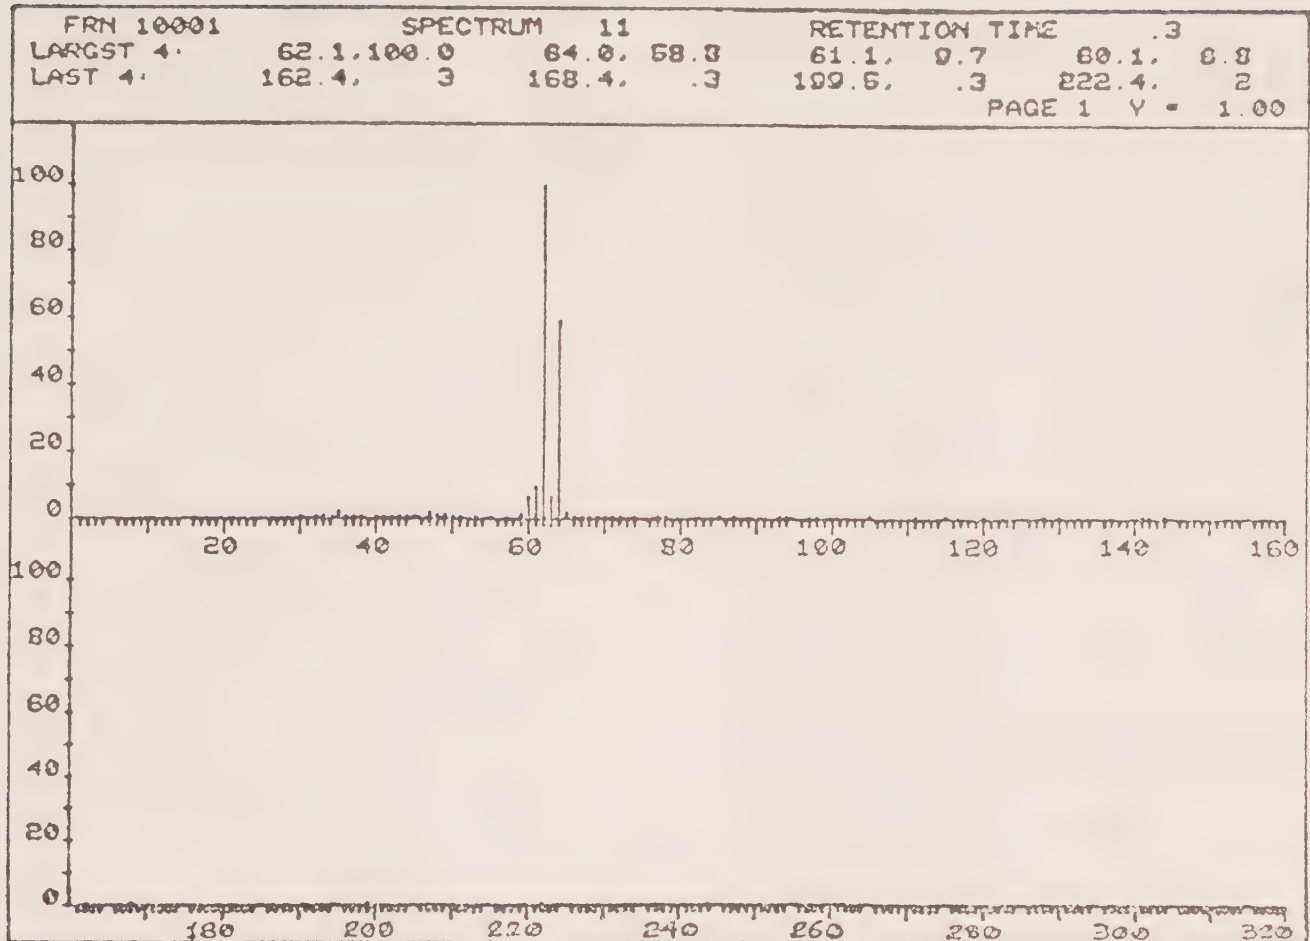

NOTE: The data listed in sections 7, 9 and 10 was obtained on a Hewlett-Packard 5840A gas chromatograph.

The mass spectrogram was obtained on a Hewlett-Packard 5985 GC/MS system.

The equipment listed above is specified for clarification purposes only and should not be taken as an endorsement by the Ministry.

SAMPLING AND ANALYTICAL PROCEDURES USED BY THE MINISTRY WILL BE REVIEWED PERIODICALLY AND, IF NECESSARY, REVISED.

MEDICAL SURVEILLANCE PROGRAM

1. PURPOSE

The objective of a medical surveillance program is to protect the health of workers by:

- (1) ensuring fitness for exposure to vinyl chloride;
- (2) evaluating the effect of vinyl chloride on workers;
- (3) enabling remedial action to be taken when necessary;
- (4) providing health education.

2. PROGRAM

The medical surveillance program shall consist of the following:

- (1) pre-employment and pre-placement medical examinations;
- (2) periodic medical examinations;

- (3) clinical tests;
- (4) health education;
- (5) record keeping.

3. MEDICAL EXAMINATIONS

The examination shall include the following:

(1) HISTORY

The initial medical and occupational history shall include enquiry for previous exposure to vinyl chloride, exposure to hepatotoxic agents (occupational and non-occupational), personal habits (smoking, alcohol drinking, drug use, personal hygiene), history of present or past gastro-intestinal, cardiovascular, renal or respiratory disorders.

At the periodic examination the history shall be updated to include:

- (a) history of frequency and duration of exposure to vinyl chloride since previous examination;
- (b) enquiry for signs and symptoms that may be an early indication of vinyl chloride toxicity;

e.g., acute— dizziness and confusion

chronic— scleroderma-like skin changes,
— acro-osteolysis,
— restrictive lung disorders.

(2) GENERAL PHYSICAL EXAMINATION

Particular attention shall be directed to those systems which may be affected by vinyl chloride. The examining physician shall determine the frequency of the periodic examination.

4. CLINICAL TESTS

Clinical tests aid in the assessment of a worker's fitness for and continued exposure to vinyl chloride.

(1) LIVER FUNCTION TESTS

Examination for liver function by blood tests such as for serum glutamic pyruvic transaminase (SGPT), serum glutamic oxalacetic transaminase (SGOT), gamma glutamyl transpeptidase transaminase (GGPT), serum albumin, serum bilirubin and serum alkaline phosphatase, may aid in the evaluation of the effect of vinyl chloride.

The frequency of testing depends on the extent of the hazard, as well as the worker's previous test levels and should be decided by the examining physician. A six month interval would be appropriate.

ACTION LEVELS

An assessment of fitness for work shall be based on the clinical examination in conjunction with the clinical test. For this reason no specific action levels are stated for the latter. If the examining physician determines that liver function tests are abnormal they should be repeated in four to six weeks. If the abnormality is confirmed, a decision shall be made by the physician as to whether the worker should be removed from vinyl chloride exposure.

If symptoms or signs of vinyl chloride toxicity are present, the worker shall be removed from vinyl chloride exposure regardless of the clinical test results. A determination by the physician shall be made as to whether the worker is fit, fit with limitations or unfit, and action taken in accordance with Section 16 of the Vinyl Chloride Regulation. Subsequently, a decision shall be made by the physician as to when the worker may return.

5. HEALTH EDUCATION

Personal cleanliness is important especially while handling polyvinyl chloride powder containing residual vinyl chloride. Workers shall be advised to wash before eating, drinking and smoking, and to shower at the end of the work shift.

All workers shall be made aware of the hazards from vinyl chloride and their examination results must be discussed.

6. MEDICAL HISTORY AND EXAMINATION RECORDS

Under the provisions of the Vinyl Chloride Regulation the examining physician shall maintain health records for each worker examined. Such records should include:

- name in full of worker;
- maiden surname of mother;
- date of birth;
- sex;
- social insurance number;
- occupations or job titles;
- date occupations or jobs commenced;
- date occupations or jobs ended;
- the kinds of operations or processes in which the worker was involved;
- concentrations of airborne vinyl chloride to which the worker is exposed;
- use of respiratory equipment;
- date of visits to physician's office;
- medical examination reports;
- health assessments;
- results of clinical tests, e.g., liver function tests;
- copies of referral letter to a hospital or physician;
- copies of Forms 7 and 8 to the Workmen's Compensation Board if completed;
- all relevant correspondence concerning health, and any information concerning the actions taken in response to abnormal clinical tests.

A worker's health records shall be kept in a secure place by the examining physician for:

- (a) a period of forty years from the time such records were first made, or
- (b) a period of twenty years from the time the last of such records were made,

whichever is the longer.

Where the examining physician or his successor is no longer able or willing to keep the records, the records are to be forwarded to the Chief Physician of the Occupational Health Medical Service of the Ministry of Labour, who will keep them in a secure place.

PERSONAL* AIR SAMPLING METHOD
FOR COKE OVEN EMISSIONS

(AS AIRBORNE BENZENE-SOLUBLE COMPOUNDS)

1. PRINCIPLE OF THE SAMPLING METHOD

Air, possibly containing benzene-soluble compounds, is drawn at a specified flow rate for a known duration through a glass fibre filter and then through a silver membrane filter held in the breathing zone of a worker by a plastic, closed-face filter holder. The benzene-soluble compounds collected on the sample filters are extracted into benzene. The extract is evaporated to dryness and the residue is weighted.

* This method may also be used for area sampling at strategically selected locations by placing a sampling train on a suitable support with its inlet port facing downward.

2. EQUIPMENT

The sampling train used to obtain an air sample of benzene-soluble compounds is to include the following components and satisfy the criteria suggested:

- (1) A battery operated, portable pump which:
 - (a) is capable of delivering, for 6-8 hours, not less than 2 litres of air per minute with filters in the sampling train. The maximum deviation from the prescribed flow rate is not to exceed ± 5 per cent and the pump should be equipped with a pulsation damper;
 - (b) is intrinsically safe, i.e., certified by an accepted agency as safe for use in potentially explosive atmospheres;
 - (c) includes a calibrated flow meter or a mechanism for maintaining a constant flow rate; and
 - (d) has an on-off switch and flow rate control or adjustment mechanism which are as tamper-proof as possible.
- (2) Glass fibre filters of appropriate size, preferably 37 millimetres (mm) diameter, at least 99 per cent efficient, free of organic binder, pre-extracted with benzene and dried.
- (3) Silver membrane filters of the same size as the glass fibre filters, preferably 37 mm in diameter, 0.8 micrometre (μm) in pore size, pre-extracted with benzene and dried.
- (4) Filter support pads of the same size as the glass fibre and silver membrane filters used, preferably 37 mm in diameter.
- (5) A closed-face filter holder of the same size as the glass fibre filters, silver membrane filters and the filter support pads used, preferably 37 mm in inner diameter and with an adapter which provides a leak-proof fit for connecting flexible tubing.
- (6) A sufficient length of flexible tubing with appropriate wall thickness to prevent its collapsing when air is drawn through and with appropriate inner diameter which will provide a leak-proof connection to the filter holder adapter and to the inlet port adapter of the portable pump.
- (7) A mercury thermometer for ambient air temperature measurement, accurate to $\pm 1^\circ\text{C}$.
- (8) A barometer for measuring atmosphere pressure, accurate to ± 5 mm Hg.

3. SAMPLING PROCEDURE

(1) Preparation of Pumps

- (a) The pump battery pack must be fully charged according to the manufacturer's instructions before use in any workshift. If air sampling is carried out for more than one shift on the same day, a fully-charged battery pack must be substituted for the used one.

- (b) Flow meters, or constant flow devices on the pumps, must be calibrated at 2.0 litres per minute (L/min) by using a primary standard, such as a bubble meter, and the procedure recommended in the manufacturer's instructions for using the primary standard apparatus. Calibration must be performed with the filter-holder assembly in line after:
 - (i) not more than 40 hours of operation;
 - (ii) receiving unusually harsh or potentially damaging treatment;
 - (iii) being disassembled for maintenance.

(2) Preparation of Filter Holders

- (a) Assemble the filter holders in a clean environment prior to initiation of sampling.
- (b) Each filter holder must be prepared by the following procedures:
 - (i) Use only a clean filter holder and handle the filter support pad and filters with tweezers. Place a filter support pad first and then a silver membrane filter in the base of a filter holder; place a glass fibre filter on top of the silver membrane filter. Finally, reassemble the cassette holder.
 - (ii) Plug the inlet and outlet ports.
 - (iii) Ensure that the joints of the filter holder are sealed with non-porous, shrinkable cellulose band or tape.

(3) Sampling

- (a) The sampling train is assembled by fixing one end of the flexible tubing to the inlet port of the pump and the other end with the adapter to the outlet port of the filter holder.
- (b) Check for air leaks in the sampling train by turning on the pump and inserting a clean plastic plug into the inlet port of the filter holder. The air flow indicator on a pump with a flow meter must drop to the zero flow position and oscillate slightly. If this does not occur, find the leak and either repair or replace the faulty component.
- (c) Label the filter holder with an appropriate sample number.
- (d) Attach the pump to the worker's belt (this is preferable) or place it in a pocket. Then place the flexible tubing over the shoulder of the worker and clip the filter holder to the clothing of the worker with the inlet port facing downward, as near as possible to the breathing zone. Ensure that the equipment will not interfere with the worker's normal duties.

- (e) Check again that all equipment is properly assembled, remove the plastic plug from the inlet port of the filter holder and switch on the pump. Allow the flow rate to stabilize for a short duration, then adjust the rate *to the pre-calibrated mark of 2 litres per minute* if the pump has a flow meter. Pumps with constant flow devices must not be reset after the flow rate control mechanism has been calibrated to deliver air at this rate. A calibrated external flow meter may be used to check the airflow rate.
 - (f) Note the following information for each sample:
 - (i) date of sampling;
 - (ii) company name;
 - (iii) model and serial number of the sampling pump;
 - (iv) calibration date of the sampling pump;
 - (v) name of worker being monitored;
 - (vi) job title of worker;
 - (vii) work or operation performed;
 - (viii) filter holder or sample number;
 - (ix) air flow rate;
 - (x) time of initiation of sampling.
 - (g) Ensure that, for any sampling performed during any survey, two control or blank filters are prepared and handled in the same manner as the sample filters except, that these blank filters must remain in sealed filter holders during the sampling (i.e., no air is to be drawn through these filters).
 - (h) Sampling may be carried out for a maximum duration of 6-8 hours, if feasible, to obtain a single air sample in a work day. Where necessary, sequential air samples may be taken as opposed to single air samples. The sampling duration may or may not include lunch breaks, depending on the nature of the work exposure to be measured. The sampling duration in a work day may be shorter than 6 hours, provided that the individual air samples taken during the selected periods are representative of the exposure of the work over the entire work shift.
 - (i) During the sampling interval, the sampling train must be checked periodically to ensure that it is functioning properly. The air flow rate must not be readjusted after the initial flow rate is set. If the flow rate changes significantly, terminate sampling and take another sample.
 - (j) The ambient temperature and pressure in each area where air samples are taken should be measured and recorded.
 - (k) To terminate sampling, perform the following sequence of steps:
 - (i) check the air flow rate just prior to the termination of air sampling;
 - (ii) record the time of termination of sampling;
 - (iii) switch off the pump and carefully remove the sampling train from the worker;
 - (iv) remove the filter holder and insert clean plastic plugs into the inlet and outlet ports;
 - (v) ship the filters and filter holder together in a light-proof container to a laboratory and request analysis of filters for benzene-soluble compounds.
- (4) A sufficient number of area samples at selected work locations are to be taken to supplement the personal sampling.
- NOTE: The frequency of sampling shall be specified in the control program. Sampling should be conducted at regular intervals such as once every three months with more frequent sampling in those work where concentrations above the time-weighted average are routinely found.

THE DETERMINATION OF BENZENE-SOLUBLE COMPOUNDS ON FILTERS USED FOR AIR SAMPLING

1. PRINCIPLE OF METHOD

- (1) Benzene-soluble compounds in air are collected on a glass fibre filter and a silver membrane filter.
- (2) The sample filters are extracted with benzene by ultrasonic agitation.
- (3) The extract is evaporated to dryness and the residue is weighed.

2. APPARATUS

- (1) Analytical balance capable of weighing to ± 1 microgram (μg).
- (2) Ultrasonic bath.
- (3) Convection drying oven (to 250°C).
- (4) Adjustable, thermostatically-controlled, hot plate (to 250°C).
- (5) Glass-stoppered 15-mL centrifuge tubes.
- (6) Allihn tubes, fine porosity fritted glass, 30 mL.
- (7) Desiccator containing indicator silica gel as the desiccant.
- (8) Suitable container, preferably a 15 mL porcelain container.
- (9) Assortment of grade "A" volumetric pipets.
- (10) Weighing papers, 8.9 by 11.4 cm (3.5 by 4.5 in).

- (11) Tweezers.
- (12) Pressure-reducing valves: a 2-gauge, 2-stage pressure-reducing valve and appropriate hose connections.
- (13) Soxhlet extraction apparatus.

3. REAGENTS

- (1) Benzene, ACS reagent grade.
- (2) Nitrogen.
- (3) Deionised water.

4. PROCEDURE

(1) Cleaning of Equipment

- (a) Before use, all new glassware and porcelain crucibles must be soaked in a suitable detergent solution to remove any residual grease or chemicals.
- (b) Glassware and porcelain crucibles must be cleaned by soaking in an approximately one in five dilution of concentrated nitric acid in water for at least 6 hours, and then rinsed thoroughly with tap water and deionised water, in that order, and then dried.
- (c) The glass fibre and silver membrane filters must be pre-extracted with benzene before sampling by means of a continuous four-hour Soxhlet extraction.

(2) Analysis of Sample

- (a) Carefully remove the filters from the filter holder and place them on a weighing paper.
- (b) Fold the filters so that they can be inserted into a 15-mL centrifuge tube.*
- (c) Add to the test tube any particulate material remaining in the filter holder or collected on the weighing paper.
- (d) Pipet 5.0 mL of benzene into the centrifuge tube. This amount of benzene should completely cover the filters.
- (e) Stopper the centrifuge tube and place the tube in the ultrasonic bath, ensuring

that the level of water in the bath is above the level of the solvent. Sonicate the sample for 5 minutes.

- (f) Carefully transfer the extract into an Allihn tube and collect the filtrate in a preweighed** porcelain crucible that has been oven-dried at 100°C for two hours and then placed overnight in a desiccator at room temperature. Positive nitrogen pressure is then used to force the solvent through the filter of the Allihn tube into the sample crucible.
- (g) Rinse the extraction tube with two 2 mL portions of benzene and filter both washes through the Allihn tube into the sample crucible.
- (h) Evaporate the sample on a hot plate until just dry and complete the drying in an oven at 100°C for 2 hours.
- (i) Transfer the sample crucible to a desiccator and allow the sample to stand overnight at room temperature.
- (j) Determine the weight of the sample crucible plus the benzene-soluble residue on an analytical balance, to the nearest microgram.
- (k) At least two sets of appropriate blank filters per set of air samples taken must be analyzed in accordance with the total procedure.

* Tweezers must be used in handling the filters.

** All weighings must be carried out in a constant humidity/temperature area.

NOTE: All procedures involving the use of benzene must be carried out in a fume hood.

5. CALIBRATION AND STANDARDS

No calibration or standards are required for this method.

6. CALCULATIONS

Total benzene-soluble compounds (in µg) = Weight of sample crucible with benzene-soluble residue (in µg) — Weight of sample crucible (in µg)

The result of this analysis is expressed as the weight (in µg) of benzene-soluble compounds in the sample filter. Corrections for the field blank must be made for each sample provided that the various amounts of analyte in all samples are greater than the amount of analyte in the field blank solution. Subtract the average weight of analyte in the blanks from each sample weight.

The concentration of benzene-soluble compounds in air, C, is expressed in mg/m³ where:

Corrected amount of benzene-soluble compounds in the sample (µg)

C = ————— air volume sampled (litre)

7. DETECTION LIMIT

The detection limit was found to be 20 µg benzene-soluble compounds per filter.

8. PRECISION (FOR WEIGHING)

Absolute Weight of Residue (in μg)	Standard Deviation (in μg) $n=10$	Relative Standard Deviation (%)
54.8	6.8	12.4
104.5	8.5	8.1

- (4) providing health education.

2. PROGRAM

The medical surveillance program shall consist of the following:

- (1) pre-employment and pre-placement examinations;
- (2) periodic medical examinations;
- (3) clinical tests;
- (4) health education;
- (5) record-keeping.

3. MEDICAL EXAMINATIONS

The examination shall include the following:

(1) HISTORY

The initial medical and occupational history shall include enquiry for previous exposure to coke oven emissions, personal habits (smoking and hygiene), and history of present or past respiratory disorders.

At the periodic examination the history shall be updated to include:

- (a) history of frequency and duration of exposure to coke oven emissions since previous examination; and

(b) enquiry for signs and symptoms that may be an early indication of skin or respiratory disease:

- (i) bronchitis (e.g., exertional dyspnea, cough, and sputum),
- (ii) malignancy (e.g., hemoptysis, pleuritic pain, loss of weight), or
- (iii) skin pathology.

(2) GENERAL PHYSICAL EXAMINATION

A general physical examination is required. Particular attention shall be directed to those systems which may be affected by coke oven emissions such as the respiratory system. The examining physician shall determine the frequency of the periodic examination.

4. CLINICAL TESTS

Clinical tests aid in the assessment of the fitness of a worker for continued exposure to coke oven emissions. The X-ray and pulmonary function testing facilities shall be engaged in a proficiency testing program with the Occupational Health Branch.

(1) X-RAYS

A chest X-ray, postero-anterior is required, but a lateral view may be requested in addition if the examining physician feels it to be necessary. The X-rays shall be taken at least biennially while occupational exposure continues. When exposure is discontinued, the frequency of X-rays and the period of surveillance will depend on the intensity and duration of exposure, and the clinical findings. The examining physician shall decide what is appropriate.

(2) PULMONARY FUNCTION TESTS

These shall be undertaken in conjunction with the X-rays and include FVC, FEV₁ and FEF 25-75% corrected to body temperature and pressure (BTPS), or other equivalent flow rate tests. (3) SPUTUM CYTOLOGY

Sputum cytology may be used for selected workers. The examining physician shall decide when it is appropriate for it to be introduced, and the frequency of testing. A reasonable follow-up would be annually after 10 years of exposure, unless clinical signs and symptoms indicate its introduction earlier.

(4) ACTION LEVELS

An assessment of fitness for work shall be based on the physical examination in conjunction with the clinical test results. No specific action levels are relevant for the latter. If the examining physician determines that the worker is fit with limitations or unfit, he shall take action in accordance with Section 16 of the Coke Oven Emissions Regulation. Subsequently a decision shall be made by the physician as to when the worker may return to work.

5. HEALTH EDUCATION

Personal cleanliness is important and workers shall be advised of the danger of smoking in coke oven emission exposure areas. All workers shall be made aware of the health hazards of coke oven emissions, and their examination results must be discussed.

6. MEDICAL HISTORY AND EXAMINATION RECORDS

Under the provisions of the Coke Oven Emissions Regulation, the examining physician shall maintain health records for each worker examined. Such records should include:

- name in full of worker;

(2) Subject to subsection (3), an employer to whom this Regulation applies shall take every precaution reasonable in the circumstances to ensure that every worker who is not an employee of the employer but who is working in the work place of the employer and is exposed to vinyl chloride and whose health is likely to be affected thereby is protected and the worker shall comply with the requirements of the employer.

(3) Subsection (2) and sections 4 to 17 of this Regulation do not apply to a constructor, an employer who is carrying out a project or a worker working on or at a project. O. Reg. 516/82, s. 3.

4.—(1) Every employer shall take all necessary measures and procedures by means of engineering controls, work practices and hygiene practices and facilities to ensure that the time-weighted average exposure of a worker to vinyl chloride is reduced to the lowest practical level and in any case shall not exceed two parts vinyl chloride per million parts of air by volume or 5.2 mg vinyl chloride per m³ of air.

(2) In complying with subsection (1), the maximum amount of vinyl chloride to which a worker is exposed

at any time shall not exceed 10 parts vinyl chloride per million parts of air by volume or 26 mg vinyl chloride per m³ of air.

(6) On a prosecution for a failure to comply with subsection (1), it shall be a defence for an employer to prove that he has complied with subsection (1) and that a breach of subsection (1) occurred solely because a worker failed to work in compliance with the work practices and hygiene practices in accordance with the provisions of the vinyl chloride control program and the employer has taken every precaution reasonable in the circumstances to require the worker to do so. O. Reg. 516/82, s. 4.

5.—(1) Where the strict duty imposed by subsection 4 (1) or 4 (2) cannot be complied with because,

(a) an emergency exists; or

(b) the measures and procedures necessary to control the exposure of a worker to airborne vinyl chloride,

(i) do not exist or are not available,

(ii) are not reasonable or practical for the length of time or frequency of exposure or the nature of the process, operation or work, or

(iii) are not effective because of a temporary breakdown of equipment,

the employer shall provide a worker with respiratory equipment which shall be used by the worker.

(2) Where respiratory equipment is provided by an employer and used by a worker, the respiratory equipment shall be appropriate in the circumstances for the concentration of vinyl chloride and shall meet or exceed the requirements set out in the Code for Respiratory Equipment for Vinyl Chloride dated the 11th day of January, 1982, and issued by the Ministry.

Schedule

The time-weighted average exposure of a worker to airborne vinyl chloride shall be calculated as follows:

1. The average concentrations of vinyl chloride to which a worker is exposed shall be determined from analyses of air samples representative of the exposure of the worker to vinyl chloride during work operations as set out in the Code mentioned in section 11.
2. The results of the analyses are the concentrations expressed as parts vinyl chloride per million parts of air by volume or as mg vinyl chloride per m³ of air.
3. The concentrations shall be multiplied by the time in hours to which the worker is taken to be exposed to such concentrations.
4. The weekly exposure shall be calculated as follows:

$C_1T_1 + C_2T_2 + \dots + C_nT_n =$ cumulative weekly exposure, where C_1 is the concentration found in an air sample and T_1 is the total time in hours to which the worker is taken to be exposed to concentration C_1 in a week.

5. The time-weighted average exposure shall be calculated by dividing the cumulative weekly exposure by 40. O. Reg. 516/82, Sched.

Schedule 1

The time-weighted average exposure of a worker to coke oven emissions shall be calculated as follows:

1. The average concentrations of coke oven emissions to which a worker is exposed shall

be determined from analyses of air samples representative of the exposure of the worker to coke oven emissions during work operations as set out in the Code mentioned in section 11.

2. The results of the analyses are the concentrations expressed as BSFTPM of coke oven emissions in mg per m³ of air.
3. The concentrations shall be multiplied by the time in hours to which the worker is taken to be exposed to such concentrations.
4. The weekly exposure shall be calculated as follows:

$C_1T_1 + C_2T_2 + \dots + C_nT_n =$ cumulative weekly exposure, where C_1 is the concentration found in an air sample and T_1 is the total time in hours to which the worker is taken to be exposed to concentration C_1 in a week.

5. The time-weighted average exposure shall be calculated by dividing the cumulative weekly exposure by 40. O. Reg. 517/82, Sched. 1.

Environmental Assessment Act

NOTICE OF APPROVAL TO PROCEED WITH THE UNDERTAKING

RE: An Environmental Assessment for the Proposed
230 kV Transmission Line from Atikokan GS to
Lakehead TS

Proponent: Ontario Hydro

EA File No. 1-78-0015-000

TAKE NOTICE that the period for requiring a hearing, provided for in the *Notice of Acceptance of the Environmental Assessment* for the undertaking, expired on November 21, 1981. I have received no notices requiring a hearing by the Environmental Assessment Board with respect to approval to proceed with the undertaking.

I have considered the purpose of the *Environmental Assessment Act* and the environmental assessment of the undertaking as accepted by me.

Accordingly, I hereby give approval to proceed with the undertaking, subject to the conditions outlined in Schedule A attached.

REASONS:

The reasons for giving approval are:

- (1) After giving the *Notice of Completion of the Environmental Assessment Review* dated September 10, 1981, I received submissions from the Ministry of Natural Resources (MNR). The Ministry of Natural Resources indicated concerns with respect to specific aspects of the proposal by Ontario Hydro, but have not required a hearing. I do not consider it advisable to require the

Environmental Assessment Board to hold a hearing at this time for the following reasons:

Meetings for the exchange of information and resolution of outstanding concerns have been successfully held. Neither Ontario Hydro nor the above-referenced party has required a hearing. The party who participated in the government review and who made submissions has concerns about a routing that may affect a population of bald eagle which is an endangered species. However, the party now understands the reasons for the choice of this route in relation to others that were considered. The conditions of approval are designed to protect the environment in accordance with understandings and agreements reached involving Ontario Hydro, the party who made submissions and the government review team. No Notices have been received by me requiring a hearing by the Environmental Assessment Board in response to the *Notice of Acceptance of the Environmental Assessment*, dated September 10, 1981. I am not aware of any outstanding issues with respect to this undertaking which suggest that a hearing should be called.

- (2) The environmental assessment, together with the Government review and conditions of approval, sufficiently fulfill the purpose of the *Environmental Assessment Act*, which is the betterment of the people of the whole or any part of Ontario by providing for the protection, conservation and wise management in Ontario of the environment.

Dated at Toronto, this 29th day of July, 1982.

K. C. NORTON,
Minister of the Environment,
135 St. Clair Avenue West,
14th Floor,

Prior to the commencement of construction of the undertaking, Ontario Hydro shall file with the said Director, letters from the Regional Directors of MOE and MNR indicating that as a result of the procedures set out in conditions 2.0 (b) and (c), they concur with the proposed mitigation measures or, if such letters are not available, Ontario Hydro shall receive approval of the proposed mitigation measures from the Director of the Environmental Approvals Branch.

- (b) Prior to construction, one copy of the documentation described in condition 2 (a) shall be submitted to the Regional Director (Thunder Bay) of the Ministry of Natural Resources. Prior to and during construction, Ontario Hydro will liaise with local Ministry of Natural Resources staff in the identification of possible outstanding sensitive areas and the development of means for avoiding the sensitive areas of mitigating impact on them. A report outlining the proposed mitigation measures to be followed during construction, will be sent to the Director of the Environmental Approvals Branch (MOE), to be filed in the Public Record for this undertaking, prior to the commencement of construction.

- (c) Prior to construction, one copy of any documentation described in condition 2 (a), which relates to environmentally significant water and/or wetland crossings, shall be submitted to the Director of the Water Resources Branch, Ministry of the Environment.

Prior to and during construction, Ontario Hydro will liaise with local Ministry of the Environment staff in the identification of possible outstanding sensitive areas. A report outlining the proposed mitigation measures to be followed during construction, will be sent to the Director of the Environmental Approvals Branch (MOE) to be filed in the Public Record for this undertaking, prior to the commencement of construction.

- 3.0 The proponent shall be responsible for ensuring, by site inspection or such other methods as may be required, that the construction of the undertaking is carried out in accordance with any mitigation measures referred to in any condition of this approval.

- (c) Subcondition (a) does not prevent a document being submitted in draft to ascertain whether the Minister is likely to impose any conditions under subsection 7 (3) of the Act which could be made unnecessary by changes to the document or consultations with other parties before the document is submitted as an amendment.

- 7.0 Except as otherwise provided by these conditions, the proponent shall comply with all of the provisions of the environmental assessment as accepted which are incorporated by reference herein.

NOTICE OF AMENDMENT OF THE ENVIRONMENTAL ASSESSMENT

NOTICE OF ACCEPTANCE OF THE ENVIRONMENTAL ASSESSMENT

NOTICE OF APPROVAL TO PROCEED WITH THE UNDERTAKING

RE: An Environmental Assessment for the Proposed Highway 11N Callander By-Pass Located in the City of North Bay in the District of Nipissing and the Townships of East Ferris and North Himsworth

Proponent: Minister of Transportation and Communications

E.A. File No. 1-80-0009-000

TAKE NOTICE that the date for receipt by me of submissions or requirements for a hearing on the above Environmental Assessment, its review by the Ontario Government and the proposed amendment of the undertaking and the Environmental Assessment, pursuant to the *Notice of Completion of Environmental Assessment Review* dated October 30, 1981 and the *Notice of Proposal to Amend an Environmental Assessment*, dated May 4, 1982, has expired as of June 10, 1982.

AMENDMENT OF THE ENVIRONMENTAL
ASSESSMENT

I have considered the purpose of the Act, the above Environmental Assessment and the Review, a submission by the Proponent, the Route Planning Study for Highway 11 Powassan to North Bay, the Preliminary Design Report for the Highway 11 Callander By-Pass and Government Review Team comments on the proponent's submission, and by written notice dated May 4, 1982, I proposed to amend the Environmental Assessment. And, as I am of the opinion that a hearing as to the amendment, acceptance of the Environmental Assessment or approval of the undertaking is not required, I hereby amend the Environmental Assessment as proposed.

The reasons for amending the Environmental Assessment are:

- (a) to make the Environmental Assessment comply with the Act;
- (b) the Environmental Assessment was inconclusive or otherwise unsatisfactory to enable a decision to be made as to whether approval to proceed with the undertaking should or should not be given, or should be given subject to terms and conditions;
- (c) since the improvements in safety and service that the Minister of Transportation and Communications cited as the rationale for the northern half of the By-Pass in the originally submitted Environmental Assessment could not be generated by the northern half of the By-Pass but only by the whole By-Pass, the original undertaking is being amended to include the southern half of the By-Pass.

ACCEPTANCE OF THE ENVIRONMENTAL
ASSESSMENT

I have considered the purpose of the Act, the above Environmental Assessment as amended, the review, a submission by the proponent, the Route Planning Study for Highway 11 Powassan to North Bay, the Preliminary Design Report for the Highway 11 Callander By-Pass and the Government Review team comments on the proponent's submission, and am of the opinion that the Environmental Assessment as amended is satisfactory to enable a decision to be made as to whether approval to proceed with the undertaking should or should not be given, or should be given subject to terms and conditions.

Accordingly, I accept the Environmental Assessment.

HEARING

Under section 13 of the Act, before I, or the Environmental Assessment Board, can consider whether approval to proceed with the undertaking should or should not be given, or should be given subject to terms and conditions, the proponent or anyone having previously made a submission under subsection 7 (2) of the Act on the *Notice of Completion of Environmental Assessment Review* for this undertaking, may require a hearing by the Environmental Assessment Board with respect to whether approval to proceed with the undertaking should or should not be given, or should be given subject to terms and conditions.

I received no submissions requiring a hearing by the Environmental Assessment Board after giving the *Notice of Completion of Environmental Assessment Review* dated October 30, 1981, or the *Notice of Proposal to amend and Environmental Assessment* dated May 4, 1982, and the proponent has waived the right to a hearing on the approval of the undertaking.

APPROVAL TO PROCEED WITH THE UNDERTAKING

I have considered the purpose of the Act, the Review and the amended Environmental Assessment of the undertaking as accepted by me.

Accordingly, I hereby give approval to proceed with the undertaking subject to the conditions set out below.

REASONS

The reasons for giving approval are:

1. On the basis of the proponent's Environmental Assessment and the review process, the Proponent's conclusion that, on balance, the advantages of this undertaking outweigh its disadvantages appears to be valid.
2. No other more beneficial alternative method of implementing the undertaking was identified.
3. On the basis of the proponent's Environmental Assessment the review process and the conditions of approval, the construction, operation and maintenance of the undertaking will be consistent with the purpose of the Act (section 2).

CONDITIONS

1. Except as provided by the subsequent conditions, the Ministry of Transportation and Communications (MTC) shall comply with all of the provisions of the Environmental Assessment as amended which are herein incorporated by reference.

WASI RIVER AND BURFORD CREEK

2. MTC shall consult with the North Bay District of the Ministry of Natural Resources (MNR) in preparing the plans, specifications and construction timetable for the Wasi River crossing regarding environmental concerns and mitigation measures.
3. MTC shall submit to the North Bay District of MNR the final plans, specifications and construction timetable for the bridge and approaches for the Wasi River and Burford Creek at least 30 days before the anticipated construction date for MNR's review and comment and will respond to any concerns raised by MNR.
4. MTC shall follow its environmental recommendations in the Preliminary Design Report for the By-pass (pages 27 to 28) for the Wasi River and other water courses and will ensure that construction through wetland areas will not inhibit or impede the natural flow of water.
5. Prior to commencing construction of the Wasi River crossing, MTC shall prepare a study design for monitoring water quality above and below the crossing site and at the spawning bed, before and after construction commences, and for monitoring, mitigation measures and impacts which will

or may affect downstream walleye spawning areas at the Wasi Falls.

The study design will be prepared in co-operation with the North Bay District of MNR. MTC will forward the study design to the Ministry of the Environment's (MOE) Water Resources Branch and the Environmental Assessment Section to be placed in the public records. MTC shall be responsible for carrying out the monitoring program.

6. (a) Before construction of the Wasi River Bridge, MTC shall designate an environmental field inspector for the construction of the Wasi River bridge whose role shall be to ensure compliance during all phases of construction with approved construction timetable, plans, procedures, specifications and drawings. This inspector will have the power to stop work for work not in compliance with the EA, the submission or these conditions.
- (b) The environmental field inspector will be responsible for the direct involvement of MNR's North Bay District and MOE's Northeastern Region through regularly scheduled field meetings and supplementary field meetings as required. The matters to be inspected are: construction progress, environmental problems encountered, the effectiveness of mitigation measures, unforeseen impacts and any other matters that the inspector considers necessary.
7. MTC shall provide the Director of the Northeastern Regional Office of MOE and the Director of MOE's Water Resources Branch with a copy of the contractor's schedule of work no later than seven days before the construction phase to which the schedule relates commences to provide an indication of the duration over which ground will be exposed, and the amount of in-stream and near-stream work time.

NORTH HIMSWORTH GAME PRESERVE

8. MTC shall review the deer/vehicle accident statistics in the vicinity of the North Himsworth Game Preserve. This information will be reviewed with MNR's North Bay District to determine the need for mitigation measures. MTC will evaluate all reasonable measures to mitigate deer/vehicle collisions if needed. This evaluation will be reviewed with the North Bay District of MNR at least 90 days before the construction of the by-pass in the vicinity of the Game Preserve. MTC will implement the appropriate recommendations from the evaluation in co-operation with MNR.

NOISE

9. MTC shall advise MOE of the information used to establish the existing ambient sound levels in the areas of the homes likely to experience any increase in the noise levels due to the proposed undertaking. An explanation as to the methods used in establishing such ambient sound levels shall also be provided.
10. MTC shall investigate the feasibility of noise control measures for those noise sensitive uses along the proposed route which are anticipated to experience an increase of more than 10 decibels. Subsequent reports shall be made to the Environmental Assessment Section of MOE for the Public Record to document the results and proposed course of action with regards to noise control measures.
11. MTC shall have regard to the provisions for noise control during construction outlined in the Model Municipal Noise Control By-Law especially when operating in the proximity of noise sensitive areas.

AGGREGATE

12. MTC shall file in the public records for the undertaking, information on the location of aggregate pits, to be used for the undertaking noting the location, ownership and dates between which excavation will take place in advance of excavation. MTC will also forward this information to the North Bay District of MNR.

ADDITIONAL INFORMATION TO BE SUPPLIED

13. MTC shall provide information on any unanticipated *impacts* of the southern portion of the By-pass that are not described in the EA, Submission, Route Planning Study and Preliminary Design Report and any required mitigation measures.

ORDER IN WHICH CONDITIONS ARE TO BE MET

14. MTC shall satisfy conditions 9 and 10 prior to beginning construction of the northern portion of the Callander By-pass.
15. MTC shall satisfy conditions 2, 3 and 13 prior to beginning construction of the southern portion of the Callander By-pass.

NOTICE OF APPLICATION FOR SPECIAL LEGISLATION

NOTICE IS HEREBY GIVEN that The Corporation of the City of Burlington will apply to the Legislative Assembly of the Province of Ontario for Special Legislation.

The Special Legislation will enable the City of Burlington to collect charges in relation to its downtown parking area, in addition to those which it may now collect, for the purpose of establishing a reserve fund to meet future anticipated costs.

Under *The Town of Burlington Act, 1968-69*, Burlington has established a parking area in the Burlington central business district, and, within a defined area of the parking area, has by by-law established and is operating several parking lots. Under *The Town of Burlington Act, 1968-69*, the capital cost of any parking facilities in the defined area, and any operating deficit incurred by the parking facilities in the defined area can be levied against the lands in the defined area which are assessed as commercial in the proportion that the commercial real property and business assessment of each parcel of such land bears to the total commercial real property and business assessment in the defined area.

The Special Legislation applied for will specifically permit a By-law passed under Section 1 of *The Town of Burlington Act, 1968-69*, to also provide that,

- (a) with the approval of the Ontario Municipal Board, an additional annual charge may be levied against the lands in a defined area within the parking area, that in the opinion of Council derive special benefit therefrom;
- (b) the entire cost chargeable to lands in the defined area shall be equitably apportioned among all parcels assessed as commercial in the proportion that the commercial real property and business assessment of each parcel bears to the total commercial real property and business assessment in the defined area;
- (c) the revenue from the annual charge referred to in clause (a),
 - (i) may be held and accumulated as a reserve fund;
 - (ii) may be used to reduce the amount of any charge or charges that would otherwise be levied under *The Town of Burlington Act, 1968-69*; and
 - (iii) subject to the powers set out in paragraphs (i) and (ii), shall be used only for purposes set out in Section 1 of *The Town of Burlington Act, 1968-69*, which section deals generally with the establishment and operation of the parking area.

Any person wishing to make submissions to the Legislative Assembly with respect to this Bill should write to the Clerk of the Legislative Assembly, Queen's Park, Toronto, Ontario M7A 1A2.

ENVIRONMENTAL ASSESSMENT ACT

O. Reg. 532/82.
 Exemption—Toronto Area Transit
 Operating Authority—MTC—49.
 Made—July 9th, 1982.
 Approved—July 9th, 1982.
 Filed—August 3rd, 1982.

ORDER MADE UNDER THE
ENVIRONMENTAL ASSESSMENT ACT

EXEMPTION—TORONTO AREA TRANSIT
OPERATING AUTHORITY—MTC—49

Having received a request from the Toronto Area Transit Operating Authority, herein referred to as “GO Transit,” that an undertaking, namely the activities of:

Taking over the operation of all or parts of the present rail passenger services operated by CN for VIA between Toronto Union Station and Stouffville and Barrie, including the substitution of bus service for part of the rail passenger service and the acquisition of property and station and other modifications incidental to such operation as set out in the request and supporting documentation for this exemption order which is filed with the public record for this undertaking maintained by the Environmental Assessment Section of the Ministry of the Environment,

be exempt from the application of the Act pursuant to section 29; and

Having been advised that if the undertaking is subject to the application of the Act, the following injury, damage or interference with the persons and property indicated will occur:

- A. Those individuals living in the vicinity of the CN Newmarket and Uxbridge Subdivisions will be left without daily passenger rail service after the VIA services are stopped on September 6, 1982.
- B. The commuters using the existing passenger rail services will be inconvenienced if the services to be abandoned by VIA Rail are not continued by GO Transit.

Having been advised:

- A. The elimination of certain rail passenger services offered on the CN Newmarket and Uxbridge Subdivisions will adversely affect those individuals dependent on these transportation services.
- B. The elimination of certain VIA rail passenger services presently offered on the CP Havelock Subdivision will result in demands being placed on the facilities at the CN Agincourt station beyond which these facilities can presently accommodate safely and efficiently.
- C. A commitment has been made by the Cabinet of the Province of Ontario to the people of the Province that passenger rail services will continue to be offered on the CN Newmarket and Uxbridge Subdivisions.

Having weighed such injury, damage, or interference against the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

The undersigned is of the opinion that it is in the public interest to order and orders that the undertaking is exempt from the application of the Act for the following reasons:

- A. The rail passenger services offered by GO Transit are an alternative to the use of private vehicles for trips to and from points accessible by GO Transit and the public transit systems to which GO Transit facilities connect.
- B. The implementation of this project without delay is recognized as being a desirable goal by the Cabinet and is in the best interests of the Province.
- C. The proponent has submitted, with the exemption request, reasonable documentation regarding the need for and impacts of this undertaking.

This exemption is subject to the following terms and conditions:

1. GO Transit will install, as soon as possible, wayside electric power units to permit the shutdown of the train diesel engine and auxiliary power units overnight, particularly during winter time at Bradford and Stouffville.
2. Subject to the availability of facilities from CN, GO Transit will ensure that trains deadhead (run without passengers) to and from Stouffville from the main GO Transit facility in Toronto rather than idling at or near the Stouffville station when wayside electric power units are not available.
3. GO Transit will limit the start up and shut down time of trains at Stouffville and Bradford to a period of 45 minutes or less, where feasible.
4. Any changes in the service or facilities or property acquisitions being provided or carried out for the purposes of the exempt undertaking which have not been included in a list provided under condition 5 shall not be exempt under this order but shall be proceeded with in accordance with the appropriate class environmental assessment, individual environmental assessment or other exemption if applicable.
5. GO Transit shall by November 1, 1982 file with the Environmental Assessment Branch of the Ministry of the Environment, a list of all changes in services or facilities or property acquisition which have been:
 - (a) completed by September 30, 1982; or
 - (b) commenced by September 30, 1982 but not completed. O. Reg. 532/82.

damage or interference with the persons and property indicated will occur:

- A. The greenhouse operator wishing to use Ontario Hydro lands and his potential suppliers and employers will be adversely affected with any delay as the plans call for the construction of the greenhouses and the planting of crops so that produce therefrom will be available for market in the spring of 1983. Any delay may result in cancellation of these plans.
- B. Ontario Hydro will be interfered with and damaged by the delay and expense resulting from the preparation of an environmental assessment for an undertaking which is urgent, is of a minor nature and will have only minimal effects on the environment.

Having weighed such injury, damage or interference with the betterment of the people of the whole or any part of Ontario by the protection, conservation and wise management in Ontario of the environment which would result from the undertaking being subject to the application of the Act;

The undersigned is of the opinion that it is in the public interest to order and orders that the undertaking is exempt from the application of the Act for the following reasons:

- A. The use of Ontario Hydro lands will enable the timely construction and operation of a greenhouse range using heat energy produced from the BNPD for an agricultural purpose.
- B. The lands to be used are zoned for agricultural use and are unlikely to be adversely affected by the undertaking. Accordingly, the delay caused by the requirement of Ontario Hydro to prepare an environmental assessment for an undertaking which is urgent, is of a minor nature and which will have only minimal effects on the environment would be undue both as to time and expense.
- C. This activity is in accordance with the provincial government objectives of bringing to economic fruition in a timely way the development of an agricultural undertaking by demonstrating the viability of using heat energy (steam), produced from uranium, as a substitute for the use of conventional fuels such as natural gas and oil for heating purposes.
- D. Ontario Hydro has advised me that through extensive review and involvement, the public and regional officials of the County of Bruce have expressed a high level of support for rapid implementation of the limited undertaking described herein.

This exemption is subject to the following terms and conditions:

1. Where the carrying out of a project requires that some activity for which an environmental assessment has been done and an approval to proceed received, be conducted, that project shall be carried out in accordance with the environmental assessment and approval to proceed.
2. The steam facilities provided for this undertaking of the approximately 20 acres site may include a 24 inch steam supply line and a 10 inch condensate return line from the Central Maintenance Facility sized for possible future development provided they are not extended past the greenhouse range.

Code for Measuring Airborne Asbestos Fibres

MINISTRY OF LABOUR

OCCUPATIONAL HEALTH AND
SAFETY DIVISION

July 19, 1982

SAMPLING METHOD FOR AIRBORNE ASBESTOS FIBRES*

1. PRINCIPLE OF THE METHOD

Air possibly containing asbestos fibres** is drawn through a cellulose ester filter of specified pore size held in an open-faced holder. A randomly selected section of the sample filter is then mounted on a microscope slide to which a drop of mounting solution is added. The filter portion is transformed from an opaque, solid membrane to an optically transparent, homogeneous gel. The slide is then mounted on a microscope stage and the fibres are counted at 400 to 450 times magnification by a specified procedure. The average number of fibres counted per field of view of the microscope is used to calculate the concentration of airborne fibres.

2. EQUIPMENT

The equipment required to obtain a sample and to perform an analysis for airborne fibres must include the following components and satisfy the criteria outlined below:

(1) Sampling Equipment

- (a) A battery operated, portable pump which must:
 - (i) be capable of delivering for a full work-shift, 2 or more litres of air per minute; the maximum deviation from the prescribed flow rate must not exceed $\pm 5\%$ and the pump should be equipped with a pulsation damper;
 - (ii) be intrinsically safe when necessary, i.e., be certified by an accepted agency as safe for use in potentially explosive atmospheres;
 - (iii) include a calibrated flow meter, volume meter or a mechanism for maintaining a prescribed flow rate;
 - (iv) have an on-off switch and flow rate control mechanism which are as tamper-proof as possible.

- (b) A 37 millimetre inner diameter filter holder which is:
 - (i) capable of being used for open-faced sampling;
 - (ii) equipped with an adapter which provides a leakproof fit for connecting flexible tubing.
- (c) Cellulose ester membrane filters, certified to be fibrefree, 37 mm in diameter and 0.8 micrometres (μm) in pore size.
- (d) Cellulose filter support pads, 37 mm in diameter.
- (e) A sufficient length of flexible polyethylene tubing with appropriate wall thickness to prevent it collapsing when air is drawn through and with appropriate inner diameter which will provide a leak-proof connection to the filter holder adapter and to the inlet port adapter of the portable pump.

(2) Analysis Equipment

- (a) An optical microscope with the following features:
 - (i) a binocular head;
 - (ii) 10 \times Huygenian or equivalent eye piece;
 - (iii) illumination with adjustable intensity;
 - (iv) Patterson Globe and Circle reticle;
 - (v) a mechanical stage;
 - (vi) a phase contrast condenser with a numerical aperture, equal to or greater than that of the objective;
 - (vii) 40 – 45 \times phase contrast achromatic objective with a numerical aperture between 0.65 and 0.75;
 - (viii) a phase ring centering telescope or Bertrand lens;
 - (ix) a stage micrometer with 0.01 mm subdivisions.
- (b) Glass microscope slides having 2.5 \times 7.5 cm dimensions with one end frosted.
- (c) Coverslip for covering the filter on the microscope slide (2.2 \times 3 cm and about 0.17 mm thick).

*This method may also be used for area sampling at strategically selected locations by placing a sampling unit on a suitable support in the same manner as it would be placed on a worker.

**Refer to the Regulation for the definitions of "asbestos", "fibre" and "fibres/cm³".

*See Appendix Two, p. 37.

- (d) Scalpel for cutting wedge-shaped portions from the filter.
- (e) Fine-tipped tweezers for handling the filter.
- (f) Mounting solution for preparation of the sample, made by mixing dimethyl phthalate and diethyl oxalate in the 1:1 ratio by volume. To this solution, 0.05 grams of cellulose ester filter per millimetre are added. Stir gently with a clean glass rod. Allow the mixture to stand until a homogeneous solution with a refractive index of approximately 1.47 is obtained. The solution must be discarded after three months or when it becomes turbid. A fresh solution must then be made. The reagents used must be reagent grade, free of *particles* and *colour* and conform to the specifications of the American Chemical Society Committee on Analytical Reagents.

3. SAMPLING PROCEDURE

(1) Preparation of Pumps

- (a) The pump battery pack must be fully charged before use in any workshift. If air sampling is carried out for more than one shift on the same day, a fully charged battery pack must be substituted for the used one.
- (b) Flow meters, volume meters or constant flow devices on the pumps must be calibrated at 2.0 litres per minute (L/min) by using a primary standard, such as a bubble meter, and the procedure recommended in the manufacturer's instructions for using the primary standard apparatus, with a representative filter holder and membrane filter in line:
 - (i) after not more than 40 hours of operation;
 - (ii) after receiving unusually harsh or potentially damaging treatment;
 - (iii) after being disassembled for maintenance.

(2) Preparation of Filter Holders

- (a) Assemble the filter holders in a clean environment prior to the initiation of sampling.
- (b) Prepare each filter holder by the following procedure:
 - (i) use only clean filter holders and handle the support pad and filter with tweezers. Place a filter support pad and a cellulose ester filter in the base of the holder;
 - (ii) plug the outlet and inlet ports;
 - (iii) ensure that the joints of the filter holder are sealed with non-porous, shrinkable cellulose band or tape.

(3) Sampling

- (a) Assemble the sampling train by fixing one end of the flexible tubing to the inlet port of the pump and the other end to the adapter on the outlet port of the filter holder.
- (b) Check for air leaks in the sampling train by turning on the pump and inserting a clean plastic plug into the inlet port of the filter holder. The flow indicator on pumps with flow or volume meters must drop to the zero position and oscillate slightly. If this does not occur, find the leak and either repair the air leak if possible, or replace the faulty component.
- (c) Label the filter holder with an appropriate sample number.
- (d) Attach the pump to the worker's belt preferably or place it in his pocket, place the flexible tubing over the shoulder and clip the filter holder to the clothing as near as possible to the breathing zone, with the inlet port of the filter holder facing downward. Ensure that the equipment will not interfere with the worker's movements.
- (e) Check that all equipment is properly assembled, remove the face portion of the filter holder, so that open-faced sampling can be performed and switch on the pump. Allow the flow rate to stabilize for a short duration, *then adjust the rate to the pre-calibrated mark* of 2 litres per minute. Pumps with constant flow devices must not be reset after the flow rate control mechanism has been adjusted to deliver air at this rate. A calibrated external flow meter may be used to check the airflow rate.
- (f) Note the following information for each sample:
 - (i) date of sampling;
 - (ii) company name;
 - (iii) model and serial number of the sampling pump;
 - (iv) calibration date of the sampling pump;
 - (v) name of worker;
 - (vi) job title;
 - (vii) sample number on the filter holder;
 - (viii) air flow rate;
 - (ix) time of initiation of sampling.
- (g) Ensure that for sampling performed during any particular survey, two control or blank filters are prepared in the same manner as the sample filters. These filters must remain in sealed holders during the sampling (i.e., no air is to be drawn through these filters). Label these as blanks and send along with the samples for analysis.

- (h) To estimate an optimum sampling duration for obtaining statistically reliable fibre counts, consideration must be given to microscope count field area, pump flow rate, estimated concentrations of airborne fibres, counting rule ranging from 20 to 100 fields and adequate fibre density to yield a minimum count of 0.1 fibre per field and background airborne particulate level (Ref. NIOSH Manual of Analytical Methods, Vol. 1, page 239-1). An optimum fibre density of about 1 to 5 fibres per field is suggested to minimize the counting errors. In order to evaluate the concentrations of airborne fibres in a workplace, it is suggested that both long and short duration samples be taken. In this way, if long duration samples are too populated with fibres to count, the short duration ones can be used to calculate the actual fibre concentration. The following formula may be used to estimate the maximum sampling duration per air sample taken:

$$t = \frac{f \times A}{F \times a \times C \times 1000} \text{ minutes}$$

Where t = maximum sampling duration per air sample taken

f = number of fibres/field desired

A = effective collecting area of filter, mm^2

a = microscope field area, mm^2

C = estimated fibre concentration, fibres/ cm^3

F = flow rate of the sampling pump, litres per minute

- (i) Sufficient number of samples should be taken to obtain a time-weighted average concentration. This sampling time may or may not include lunch breaks, depending on the nature of the work exposure to be measured. The individual air samples taken during the selected periods are to be representative of the worker's exposure.
- (j) In order to evaluate the maximum concentration for any short period, several air samples must be taken over 15 minute durations when the peak concentrations of airborne asbestos are expected.
- (k) During the sampling interval, the equipment must be checked periodically to ensure that it is functioning properly. The air flow rate should not be re-adjusted after the initial flow rate is set. If the flow rate changes significantly, terminate sampling and take another sample.
- (l) The ambient air temperature and pressure in the sampling area, if required, should be recorded at least once.

- (m) To terminate sampling, perform the following sequence of steps:

- (i) check the air flow rate just prior to termination of sampling;
- (ii) record the time of termination of sampling;
- (iii) switch off the pump and carefully remove the sampling train from the worker;
- (iv) remove the filter holder, replace the face portion of the holder and insert clean plastic plugs into the inlet and outlet ports;
- (v) pack the filter holders in a rigid container with sufficient soft packing material to prevent crushing and transference of vibrations to the filter during transport to the laboratory.

4. FIBRE COUNTING PROCEDURE

(1) Calibration of the Area of the Microscope Field of View

- (a) The Patterson reticle must be calibrated with a stage micrometer. Each combination of eye piece and objective used with the reticle must also be calibrated at least once:
- (i) when the microscope is first received;
 - (ii) when new objectives or eye pieces are installed;
 - (iii) after the microscope has received a major servicing.
- (b) Follow the procedure below to perform a proper calibration of the area of the reticle:
- (i) With a $10\times$ objective in the microscope, place the stage micrometer on the mechanical stage, focus on the millimetre scale and center the image.
 - (ii) Change to the $40\times$ objective and adjust the first millimetre scale division to coincide with the left boundary of the Patterson Globe and Circle reticle.
 - (iii) Read the micrometer position best coinciding with the right boundary of the reticle. Estimate any portion of the final division. This measurement represents the length (L) of the reticle.
 - (iv) Give a 90° rotation to the eyepiece (with reticle) and adjust the first millimetre scale division to coincide with the left boundary of the Patterson reticle.
 - (v) Read the micrometer position best coinciding with the right boundary of the reticle. Estimate any portion

of the final division. This measurement represents the width (W) of the reticle.

- (vi) Calculate the area (a) of the reticle,

$$a = L \times W \text{ mm}^2$$

- (vii) Calculate the circle diameters. The #25 circle diameter is $0.1 \times$ (reticle length). The circle diameters are proportional to the ratio of their numbers. Thus the #20 circle diameter is $20/25$ or 0.8 times the #25 circle diameter.

EXAMPLE:

If length = 0.112 mm and width = 0.051 mm
Microscope Field Area = $0.112 \times 0.051 = 0.0057 \text{ mm}^2$

Circle No. Diameter (μm)

25	11.2
20	8.95
15	6.72
12.5	5.60
10	4.48
8	3.58
6	2.69
4	1.79

(2) Preparation of Slides

- Perform all work in a clean environment. Clean slides, cover slips and all tools with lens tissue and lay slides on a clean surface with frosted end facing upward.
- Label the frosted glass part of the slide with the same sample number as the filter holder containing the sample filter.
- Using a glass rod, stir the mounting solution vigorously to ensure homogeneity, apply a drop to the center of the slide and spread this solution into the approximate shape and size of the wedge cut from the sample filter.
- Disassemble the holder to expose the filter and make two cuts from the center of the filter to the perimeter. The wedge cut is to be approximately *one eighth* of the total surface of the filter.
- Transfer the wedge to the solution on the slide, exposed side facing upward, with clean tweezers.
- Carefully place a cover slip over the wedge. *Do not* press or reposition the cover slip once contact with the solution has been made.
- Slides must be left for at least one hour after preparation, before the counting begins. If counting is not completed within 48 hours, the slide must be discarded.

(3) Counting of Fibres on the Slides*

- Position the slide on the mechanical stage with the centre of the wedge under the objective lens and focus on the sample.
- Move the slide to a position near one side of the wedge and select a random field of view, i.e. the area of the reticle, by looking away from the microscope and advancing the slide in one direction with the mechanical stage control.
- Use the fine focus adjustment to scan different focal planes of the filter surface to obtain an accurate count in each field of view.
- Use the following criteria for counting of fibres for each field of view:
 - avoid counting fields on the edge of the filter;
 - if a mass of material covers a significant portion of the field of view, reject the field and select a new one. Do not use the discarded field in the calculation;
 - if the filter is too heavily loaded with fibres, i.e. more than twenty-five fibres are present in each field of view, do not count this filter and use only those samples obtained over short durations, if possible, to obtain estimates of the fibre concentration;
 - count only those fibres with an aspect ratio of 3:1 or greater, with a length greater than $5 \mu\text{m}$, and with a diameter smaller than $3 \mu\text{m}$; use the calibrated circles of the reticle to estimate the length and diameter of fibres; measure curved fibres along the curve to estimate the total length;
 - count a fibre positioned entirely within the borders of the field of view as one fibre;
 - count a fibre with one end outside the field of view as half a fibre and *do not* count a fibre with both ends outside the field;
 - a bundle of fibres is counted as one fibre unless both ends of the bundle can be clearly resolved.

*Where there is an exposure to different kinds of asbestos fibres or asbestos and other non-asbestos fibres, the filters must also be analysed by other techniques such as electron microscopy, x-ray diffraction, etc., to identify each kind of asbestos fibre present by comparing physical and chemical properties with those of the reference asbestos materials listed in Appendix One (page 37) and to determine its percentage.

- (e) Record the total number of fibres in each field of view.
 - (f) Select a new field of view by repeating part (b); when the opposite side of the filter has been reached, advance the other directional control of the mechanical stage and follow a path roughly parallel with the first series of field selected. Following this zig-zag pattern maximizes the area of the filter covered.
 - (g) Stop counting only when a minimum of 20 fields containing 100 or more fibres have been counted, or when a total of 100 fields have been counted.
- (4) **Quality Control on Counting and Preparation**
- (a) Count the blank filters first; if these blanks contain more than 3 fibres in 50 fields of view, investigate the sources of contamination and repeat air sampling.
 - (b) One sample in every twenty or one sample per batch, whichever is less, selected at random, must be recounted by the same person. If the percent difference between the two counts is greater than 30%, then two additional samples from the batch must be recounted. If these two also show a variation greater than 30%, then all samples in the group of twenty or the batch must be recounted, and the mean results of the two separate counts must be reported for this group of samples. (Note: If the difference is greater than 60% on these samples, then the sampling must be repeated).
 - (c) One sample in every twenty or one sample per batch, whichever is less (i.e. not the same sample as selected for recounting), selected at random, must be reprepared from a freshly cut section of filter and recounted by the same counter. If the difference between the two counts is greater than 50% then two additional samples from the batch must be recounted. If these two also exhibit a difference greater than 50%, then all samples in the group of twenty or the batch must be recounted, and mean results of the two separate counts must be reported for this group of samples.

(5) **Calculation of Results**

Results of mean fibre count per field of view can be converted to concentration of asbestos fibres in the air sample by using the following equation:

$$C = \frac{885 \times (A-B)}{1000 \times T \times F \times a}$$

where C=the airborne fibre concentration in units of fibres per cubic centimetre

A=the total number of fibres counted per wedge divided by the total number of fields of view observed

B=the mean of the total number of fibres counted per wedge on the blank filters divided by the total number of fields of view observed

885=the collecting area of the filter for a 37 mm diameter filter with an effective diameter of 33 mm in mm²

1000=the factor for converting litres to cubic centimetres

T=sampling duration in minutes

F=flow rate of the sampling pump, litres per minute

a=the area of the field of view of the microscope in mm²

NOTE: Correct the volume of air sampled for pressure and/or temperature variations if necessary.

- (6) Sufficient area samples must also be taken at all work locations.

(7) **Limitation**

In a workplace atmosphere known to contain asbestos, all fibres with a length to diameter ratio of 3 to 1 or greater, and a length greater than 5 micrometres and a diameter smaller than 3 micrometres are, in the absence of other information, considered to be asbestos fibres and counted as such.

APPENDIX ONE

- (1) UICC* Chrysotile;
- (2) UICC Amosite;
- (3) UICC Anthophyllite;

APPENDIX TWO

Alternatively, 25-mm filters and filter assemblies can be used as long as the appropriate adjustments are made particularly for filter collecting area and wedge cut size.

ANALYTICAL PROCEDURES USED BY THE MINISTRY WILL BE REVIEWED PERIODICALLY AND, IF NECESSARY, REVISED.

Code for Medical Surveillance of Asbestos Exposed Workers

MINISTRY OF LABOUR

OCCUPATIONAL HEALTH AND
SAFETY DIVISION

July 19, 1982

MEDICAL SURVEILLANCE PROGRAM

1. PURPOSE

The objective of a medical surveillance program is to protect the health of workers by:

- (a) ensuring fitness for exposure to asbestos;
- (b) evaluating the effects of asbestos exposure on workers;
- (c) enabling remedial action to be taken when necessary;
- (d) providing health education.

2. PROGRAM

The medical surveillance program shall consist of the following:

- (a) pre-employment and pre-placement examinations;
- (b) periodic medical examinations;
- (c) clinical tests;
- (d) health education;
- (e) record-keeping.

3. MEDICAL EXAMINATIONS

The examination shall include the following:

- (1) *History*: The initial medical and occupational history shall include enquiry for previous exposure to asbestos (both occupational and non-occupational), personal habits (smoking and hygiene), history of present or past gastro-intestinal and respiratory disorders. At the periodic examination the history shall be updated to include:

- (a) history of frequency and duration of exposure to asbestos since previous examination;
- (b) enquiry for signs and symptoms that may be an early indication of:
 - (i) asbestosis, e.g., exertional dyspnea, cough,
 - (ii) malignancy e.g., hemoptysis, pleuritic pain, loss of weight.

- (2) *Physical Examination*: A general physical examination is required. Particular attention shall be directed to those systems which may be affected by asbestos, e.g., respiratory and gastro-intestinal systems. The frequency of the periodic examination will depend on the intensity and length of exposure to asbestos and should be decided by the examining physician. It need not be the same for all workers but shall be done at least biennially.

4. CLINICAL TESTS

Clinical tests aid in the assessment of a worker's fitness for exposure to asbestos.

The X-ray and pulmonary function testing facilities shall be engaged in a proficiency testing program with the Occupational Health Branch. The x-rays shall be interpreted by a radiologist or chest physician proficient in reading chest radio-graphs by the International Labour Office, 1980 Code.

- (1) *X-Rays*: A chest x-ray, postero-anterior shall be taken at least biennially during the first 10 years of exposure, and annually thereafter while work exposed. A lateral x-ray is necessary only if required by the examining physician. When exposure is discontinued the frequency of x-rays and the period of surveillance will depend on the intensity and duration of exposure and the findings in previous x-rays. The examining physician shall determine the duration and frequency of follow-up.

- (2) *Pulmonary Function Tests*: Pulmonary function tests shall be taken in conjunction with the chest x-ray. The instruments shall be calibrated to currently applied standards as published in the "Snowbird Workshop on Standardization of Spirometry", American Review of Respiratory Disease, Vol. 119, 831-838, 1979. The tests shall include FEV₁, FVC, FEV₁/FVC% and a mid flow rate such as FEF 25-75%. All relevant data shall be corrected to body temperature and pressure (BTPS).

- (3) *Action Levels*: An assessment of fitness for work shall be based on the clinical examination in conjunction with the clinical tests. For this reason no specific action is stated for the latter. If the examining physician determines that signs of asbestos induced disease are present the worker shall not be removed from asbestos exposure before consultation with the senior chest disease consultant of the Ministry of Labour and a rehabilitation officer of the Workmen's Compensation Board (WCB). To qualify for compensation or rehabilitation further assessment by the WCB will be necessary. If asbestos induced disease is confirmed the physician shall then determine whether the worker is fit, fit with limitations or unfit and take action in accordance with Section 16 of the Asbestos Regulation.

5. HEALTH EDUCATION

At the pre-placement and periodic examinations all workers shall be advised of the hazard from asbestos and smoking, and their examination results shall be discussed. A worker on leaving employment shall be advised to inform his Family Physician of his previous asbestos exposure whenever he is being examined.

6. MEDICAL HISTORY AND EXAMINATION RECORDS

Under the provisions of the Asbestos Regulation the examining physician shall maintain health records for each worker examined. Such records should include:

- name in full of worker;
- maiden surname of mother;
- date of birth;
- sex;
- Social Insurance Number;
- occupations or job titles;
- date occupations or jobs commenced;
- date occupations or jobs ended;
- the kinds of operations or processes in which the worker was involved;
- concentrations of airborne asbestos to which worker is exposed;
- use of respiratory equipment;

- date of visits to physician's office;
- medical examination reports;
- health assessments;
- results of clinical tests, e.g., chest x-rays and pulmonary function tests;
- copies of referral letter to a hospital or physician;
- copies of Forms 7 and 8 to Workmen's Compensation Board, if completed;
- all relevant correspondence concerning health, and any information concerning the actions taken in response to abnormal clinical tests.

A worker's health records shall be kept in a secure place by the examining physician for:

- (a) a period of forty years from the time such records were first made, or
- (b) a period of twenty years from the time the last of such records were made,

whichever is the longer. Where the examining physician or his successor is no longer able or willing to keep the records, the records are to be forwarded to the Chief Physician of the Occupational Health Medical Service of the Ministry of Labour, who will keep them in a secure place.

The Special Legislation applied for will specifically permit a By-law passed under Section 1 of *The Town of Burlington Act, 1968-69*, to also provide that,

- (a) with the approval of the Ontario Municipal Board, an additional annual charge may be levied against the lands in a defined area within the parking area, that in the opinion of Council derive special benefit therefrom;
- (b) the entire cost chargeable to lands in the defined area shall be equitably apportioned among all parcels assessed as commercial in the proportion that the commercial real property and business assessment of each parcel bears to the total commercial real property and business assessment in the defined area;
- (c) the revenue from the annual charge referred to in clause (a),
 - (i) may be held and accumulated as a reserve fund;
 - (ii) may be used to reduce the amount of any charge or charges that would otherwise be levied under *The Town of Burlington Act, 1968-69*; and

Treasurers' Sales of Lands for Taxes

Each year, municipal and county treasurers compile a list of properties against which taxes are outstanding for at least two successive years, which is a period sufficient to permit sale of the owner's assets to reimburse the municipality. These lists are submitted by the municipal representative to the Ministry of Government Services for publication in THE ONTARIO GAZETTE.

The Gazette is published every Saturday. Tax sale lands are included only in the issue of the first Saturday of each month. Each property is described so that it may be properly identified. Also shown are the amount of tax arrears and costs, and the date, time and place where the sale will be held, which is usually in a public building in the locality. Sales are held three months or later following the date of publication in the Gazette and are subject to a reserve bid equal to the amount of tax arrears and costs.

The previous owner may by law redeem the property any time within one year and one day after the date of tax sale by paying to the municipality all arrears plus costs levied. Where redemption occurs, the municipality reimburses the purchaser of tax sale lands for the amount paid at the sale plus an additional amount to be determined in each case.

If the land is not redeemed in the manner described above, the purchaser at sale, receives from the municipality a tax deed or certificate which should be registered in the appropriate Land Titles or Registry Office. A purchaser should ascertain from either of these offices, information relating to any of the charges or liens against the land and consider the advisability of employing the services of a solicitor to determine the extent, if any, of his liability.

GENERAL

6.—(1) In the calculation of the grants under the Act for a municipality, where incorporation took place effective on or after the first day of the calendar year or where major boundary changes took place on or after the first day of the calendar year, data pertaining to the immediately preceding year may be adjusted to take into account such incorporation or changes in boundaries.

(4) Where the Minister considers revisions to the 1981 financial information return by a municipality to be necessary for the purposes of the payment of a grant under the Act, the Minister may amend the data as the Minister considers necessary to calculate the amount of the grant payable to the municipality. O. Reg. 565/82, s. 8.

9. The Minister in any year may make interim payments to each municipality not exceeding 50 per cent of the total grants paid to each municipality under the Act in the immediately preceding year. O. Reg. 565/82, s. 9.

1. In this Regulation,

(a) "asbestos" means any of the following fibrous silicates:

actinolite, amosite, anthophyllite,
chrysotile, crocidolite or tremolite;

(b) "fibre" means a fibre of asbestos that is more than five micrometres in length and less than three micrometres in width and that has a length to width ratio not less than three to one as viewed in a phase contrast optical microscope at four hundred to five hundred magnification;

(c) "fibres/cm³" means fibres per cubic centimetre;

(d) "joint health and safety committee" includes a joint health and safety committee established under section 8 of the Act, a committee of like nature and the workers or their representatives who participate in an arrangement, program or system conforming to subsection 8 (2) of the Act. O. Reg. 570/82, s. 1.

2. Asbestos is prescribed as a designated substance. O. Reg. 570/82, s. 2.

3.—(1) Subject to subsection (3), this Regulation applies to every employer and worker at a work place where asbestos is present, processed, mined, used, handled or stored and at which the worker is likely to inhale or ingest asbestos.

(2) Subject to subsection (3), an employer to whom this Regulation applies shall take every precaution reasonable in the circumstances to ensure that every worker who is not an employee of the employer but who is working in the work place of the employer and is exposed to asbestos and whose health is likely to be affected thereby is protected and the worker shall comply with the requirements of the employer.

(3) Subsection (2) and sections 4 to 17 do not apply to a constructor, to an employer who is carrying out a project, or to a worker working on or at a project. O. Reg. 570/82, s. 3.

4.—(1) Every employer shall take all necessary measures and procedures by means of engineering controls, work practices and hygiene practices and facilities to ensure that the time-weighted average exposure of a worker to airborne asbestos is reduced to the lowest practical level and in any case shall not exceed,

(a) in the case of amosite, 0.5 fibres/cm³ of air;

(b) in the case of crocidolite, 0.2 fibres/cm³ of air; and

(c) in the case of other asbestos, 1.0 fibres/cm³ of air.

(b) in the case of crocidolite, 1.0 fibres/cm³ of air; and

(c) in the case of other asbestos, 5.0 fibres/cm³ of air.

(3) Where a worker is exposed to more than one kind of asbestos that includes amosite or crocidolite or both, the time-weighted average exposure or maximum concentration of exposure of a worker to such asbestos shall not exceed the exposure limits prescribed by subsection (1) or (2) for crocidolite where amosite is or is not present and for amosite where crocidolite is not present.

(4) Subject to section 5, every employer shall comply with subsections (1), (2) and (3) without requiring a worker to wear and use respiratory equipment.

(6) Every worker shall work in compliance with the work practices and hygiene practices in accordance with the provisions of the asbestos control program.

(7) On a prosecution for a failure to comply with subsection (1), (2) or (3), it shall be a defence for an employer to prove that he has complied with subsection (1), (2) or (3) and that a breach of subsection (1), (2) or (3) occurred solely because a worker failed to work in compliance with the work practices and hygiene practices in accordance with the provisions of the asbestos control program and the employer has taken every precaution reasonable in the circumstances to require the worker to do so. O. Reg. 570/82, s. 4.

5.—(1) Where the strict duty imposed by subsections 4 (1), (2) and (3) cannot be complied with because,

- (a) an emergency exists; or
- (b) the measures and procedures necessary to control the exposure of a worker to airborne asbestos,
 - (i) do not exist or are unavailable,
 - (ii) are not reasonable or practical for the length of time or frequency of exposure or the nature of the process, operation or work, or
 - (iii) are not effective because of a temporary breakdown of equipment,

the employer shall provide a worker with respiratory equipment which shall be used by the worker.

(2) Where respiratory equipment is provided by an employer and used by a worker, the respiratory equipment shall be appropriate in the circumstances for the type and the concentration of airborne asbestos and shall meet or exceed the requirements set out in the Code for Respiratory Equipment for Asbestos dated the 19th day of July, 1982, and issued by the Ministry.

(3) The employer shall provide training and instruction to a worker in the proper care and use of respiratory equipment provided by the employer. O. Reg. 570/82, s. 5.

(4) A copy of the assessment made by an employer shall be given by the employer to each member of the joint health and safety committee. O. Reg. 570/82, s. 6.

7.—(1) Where the assessment discloses or would, if made in conformity with section 6, disclose that a worker is likely to inhale or ingest asbestos and that the health of the worker may be affected thereby, the employer shall develop, establish, put into effect and maintain measures and procedures to control the exposure of the worker to asbestos and shall incorporate the same into an asbestos control program.

(2) The asbestos control program shall include provisions for,

- (c) personal records of the exposure of a worker to asbestos at the work place, including the time-weighted average exposure of the worker and of the concentrations of asbestos and the times in which such concentrations were taken to be representative of the exposure of the worker and used in calculating the average exposure, to be maintained by the employer;
- (d) medical examinations and clinical tests of a worker; and
- (e) records of medical examinations and clinical tests of a worker to be maintained by a physician who has examined the worker or under whose direction the examination and tests have been performed.

8. Where a change is made in a process involving asbestos, or in the methods and procedures in the mining, use, handling or storage of asbestos and the change could result in a significant difference in the

exposure of a worker to the inhalation or ingestion of asbestos, the employer shall cause a further assessment to be made forthwith and the provisions of sections 6 and 7 apply to the further assessment. O. Reg. 570/82, s. 8.

9.—(1) Where disputes arise between an employer and a joint health and safety committee as to an assessment required under section 6 or 8 or as to the measures and procedures mentioned in subsection 7 (1) or the asbestos control program or its provisions required under section 7 or 8, the employer, a member of the joint health and safety committee or the committee may notify an inspector thereof who shall investigate and give a decision in writing to the employer and to the member or the committee.

(2) Nothing in subsection (1) applies so as to affect the power of an inspector to issue an order for a contravention of this Regulation. O. Reg. 570/82, s. 9.

10.—(1) A copy of the asbestos control program put into effect by the employer shall be given by the employer to each member of the joint health and safety committee and the employer shall acquaint every worker affected by the asbestos control program with its provisions.

Subject to section 17, the procedures for monitoring, sampling and determining the concentrations of airborne asbestos in the atmosphere of a work place and the exposure of a worker thereto shall be those set out in the Code for Measuring Airborne Asbestos Fibres dated the 19th day of July, 1982 and issued by the Ministry. O. Reg. 570/82, s. 11.

12. The results of monitoring the concentrations of airborne asbestos in the work place and the exposure of a worker thereto as provided by the asbestos control program shall be,

- (a) posted forthwith by the employer, as soon as the results are available, in a conspicuous place or places at the work place where they are most likely to come to the attention of the workers affected thereby, for a period of at least fourteen days;
- (b) furnished to the joint health and safety committee; and
- (c) kept by the employer for a period of at least five years. O. Reg. 570/82, s. 12.

13.—(1) A worker shall, at the expense of the employer, undergo the medical examinations and clinical tests required under the asbestos control program.

(2) The medical examinations and clinical tests required under the asbestos control program shall make provisions for,

- (a) pre-employment and pre-placement medical examinations to include,
 - (i) a medical history,
 - (ii) a physical examination, and
 - (iii) clinical tests including chest x-rays and pulmonary function tests as required by the examining physician; and
- (b) periodic medical examinations and clinical tests consisting of the items prescribed by clause (a).

(3) The medical history, physical examination and clinical tests shall meet the provisions of the Code for Medical Surveillance of Asbestos Exposed Workers dated the 19th day of July, 1982 and issued by the Ministry. O. Reg. 570/82, s. 13.

14.—(1) The records of the exposures of each worker to airborne asbestos at the work place to be maintained as provided by the asbestos control program shall identify the worker, including his date of birth, his jobs or occupations at the work place, the results of monitoring for exposure to airborne asbestos in his work area and the use by the worker of respiratory equipment and its type.

(2) The employer shall provide a copy of the records of the exposures of the worker to airborne asbestos as provided by the asbestos control program to the physician who examines the worker and under whose supervision the clinical tests of the worker are performed. O. Reg. 570/82, s. 14.

15.—(1) The records of medical examinations and clinical tests of a worker obtained and made under this Regulation and of the exposures of the worker to airborne asbestos furnished by the employer under subsection 14 (2) shall be kept in a secure place by the physician who has conducted the examinations and tests or under whose supervision the examinations and tests have been made for,

- (a) a period of forty years from the time such records were first made; or

whichever is the longer.

(2) Where the physician is no longer able or willing to keep the records, the records shall be forwarded to the Chief Physician, Occupational Health Medical Service of the Ministry, or a physician designated by the Chief Physician and the provisions of subsection

(1) shall, with necessary modifications, apply thereto. O. Reg. 570/82, s. 15.

16.—(1) The physician conducting the physical examination or clinical tests or under whose supervision the examination or tests are made shall advise the employer, who shall act thereon, and the worker whether the worker is fit or because of a condition resulting from exposure to asbestos is fit with limitations or unfit, to work in an asbestos exposure without giving or disclosing to the employer the records or results of the examination or tests, and in advising that the worker is fit with limitations or unfit, the physician shall be governed by the provisions of the Code for Medical Surveillance of Asbestos Exposed Workers referred to in subsection 13 (3).

(2) Where a worker is removed from exposure to asbestos because a physical examination or clinical test discloses that the worker may have or has a condition resulting from exposure to asbestos and suffers a loss of earnings occasioned thereby, the worker is entitled to compensation for the loss in the manner and to the extent provided by the *Workmen's Compensation Act*.

(3) Upon advising the employer and the worker that a worker, because of a condition resulting from exposure to asbestos, is fit with limitations or unfit for work in an asbestos exposure, the physician shall advise in writing, upon a confidential basis, the joint health and safety committee thereof and in giving such advice shall indicate his opinion as to the interpretation to be placed thereon.

Schedule

The time-weighted average exposure of a worker to airborne asbestos shall be calculated as follows:

1. The average concentrations of asbestos to which a worker is exposed shall be determined from analyses of air samples representative of the exposure of the worker to asbestos during working operations as set out in the Code mentioned in section 11.
2. The results of the analyses are the concentrations expressed as the number of fibres per cubic centimetre of air.
3. The concentrations shall be multiplied by the time in hours to which the worker is taken to be exposed to such concentrations.
4. The weekly exposure shall be calculated as follows:

$C_1T_1 + C_2T_2 + \dots + C_nT_n =$ cumulative weekly exposure, where C_1 is the concentration found in an air sample and T_1 is the total time in hours to which the worker is taken to be exposed to concentration C_1 in a week.

5. The time-weighted average exposure shall be calculated by dividing the cumulative weekly exposure by 40. O. Reg. 570/82, Sched.

in the same manner and with the same remedies as real property taxes.

 - (ii) by way of a mortgage other than a sale or foreclosure under the mortgage.
- (c) Where a by-law passed under clause (c) of subsection (1) is in force, forthwith after a credit or refund has been allowed under the by-law for the first time in respect of any real property or for the first time after a lien under this section in respect of any real property has been discharged, a notice signed by the treasurer of the Borough stating that a credit or refund has been allowed together with a description of the real property sufficient for registration shall be registered in the proper land registry office and, upon payment in full to the treasurer of the Borough of the amount of all outstanding credits and refunds allowed in respect of the property, a certificate
